Communications Deregulation And Fcc Reform Finishing The Job:

Communications Deregulation and FCC Reform: Finishing the Job Jeffrey A. Eisenach, Randolph J. May, 2001-08-31

Communications markets have made much progress towards competition and deregulation in recent years. However, it is increasingly clear in the age of the Internet and the digital revolution that much more needs to be done and that new approaches both at the Federal Communications Commission and in Congress will be required to complete the task. In this volume, the Progress and Freedom Foundation presents nine papers by communications policy experts and government policymakers that show how to finish the job of deregulating communications markets and reforming the FCC. The Telecommunications Act of 1996 was a landmark piece of legislation for an industry moving from a monopoly orientation towards competition, but additional steps are needed to complete the process of implementing the pro-competitive deregulatory vision of the act. Bringing together a group of the caliber represented in this book makes possible the best recommendations about the exact nature of those necessary changes. In this volume, the most difficult and politically charged hot-button issues involving local and long-distance competition, universal service, spectrum allocation, program content regulation, and the public interest doctrine are confronted head-on. As importantly, the authors recommend specific reform proposals to be considered by the Federal Communications Commission and Congress. The ideas contained in the experts' essays were presented and debated at a conference hosted by The Progress Freedom Foundation, which was held in Washington, DC, on December 8, 2000. The Progress Freedom Foundation studies the impact of the digital revolution and its implications for public policy. It conducts research in fields such as electronic commerce, telecommunications, and the impact of the Internet on government, society, and economic growth. It also studies issues such as the need to reform government regulation, especially in technology-intensive fields such as medical innovation, energy, and environmental regulation.

The Liberalisation of the Telecommunications Sector in Sub-Saharan Africa and Fostering Competition in Telecommunications Services Markets Rachel Alemu, 2018-02-02

This study investigates whether the existing regulatory framework governing the telecommunications sector in countries in Sub-Saharan Africa effectively deals with emerging competition-related concerns in the liberalised sector. Using Uganda as a case study, it analyses the relevant provisions of the law governing competition in the telecommunications sector and presents three key findings. Firstly, while there is comprehensive legislation on interconnection and spectrum management, inefficient enforcement of the legislation has perpetuated concerns surrounding spectrum scarcity and interconnection. Secondly, the legislative framework governing anti-competitive behaviour, though in line with the established principles of competition law, is not sufficient. Specifically, the framework is not equipped to govern the conduct of multinational telecommunications groups that have a strong presence in the telecommunications sector. Major factors hampering efficient competition regulation include Uganda's sole reliance on sector-specific competition rules, restricted available remedies, and a regulator with limited experience of enforcing

competition legislation The weaknesses in the framework strongly suggest the need to adopt an economy wide competition law Lastly wireless technology is the main means through which the population in Uganda accesses telecommunications services Greater emphasis should be placed on regulating conduct in the wireless communications markets *Regulating Platforms* Terry Flew,2021-11-30 We once thought of cyberspace as a borderless world As the internet has become increasingly platformized with a small number of technology giants that dominate the global digital economy concerns about information monopolies hateful online content and the impact on media content creators and creative industries have become more marked Consequently governments politicians and civil society are questioning how digital platforms can or should be regulated In this up to the minute study Terry Flew engages with important questions surrounding platform regulation Starting from the premise that governance is an inherent feature of digital platforms he argues that the challenge is to develop the best frameworks for balancing external regulatory oversight with the internal governance practices of platform companies The intersection of media policy information policy and economic policy is an important element of policy frameworks as national authorities increasingly seek to engage with the power of global digital platforms Lively and accessible *Regulating Platforms* is a go to text for students and scholars of media and communication [Encyclopedia of Environment and Society](#) Paul Robbins,2007-08-27 As befits the topic this beautifully packaged wonderfully illustrated interdisciplinary resource has more than 1200 entries written by specialists A helpful reader s guide groups topics like agriculture conservation and ecology movements and regulations politics pollution and society A resource guide chronology glossary and list of the UN s economic indicators complete the set Library Journal this important work gives a well focused snapshot of environmentalism in the early 21st Century and it will remain valuable into the future both for its content and as a yardstick to measure progress toward sustainability and conservation Summing Up Recommended Undergraduates and general readers CHOICE Booklist Editors Choice 2008 This superb interdisciplinary work should find a place on the shelves of every public and academic library that has the least bit of interest in environment issues which should mean just about all Booklist Starred Review Where does the environment leave off and society begin When expanding production and consumption drives greenhouse gas emissions that warm the planet which in turn influence the conditions of economic expansion it is unclear where the climate ends and the economy begins This fact is not new to our era however our social and natural sciences have only recently come to grips with the incredible complexity of the world described by understanding the environment and society as being of a piece As a result in the last decade there has been an unprecedented explosion of new concepts theories facts and techniques that follow from such an understanding The *Encyclopedia of Environment and Society* brings together multiplying issues concepts theories examples problems and policies with the goal of clearly explicating an emerging way of thinking about people and nature With more than 1 200 entries written by experts from incredibly diverse fields this innovative resource is a first step toward diving into the deep pool of emerging knowledge The five volumes of this

Reluctant Power Rita Zajacz, 2019-08-06 How early twentieth century American policymakers sought to gain control over radiotelegraphy networks in an effort to advance the global position of the United States In *Reluctant Power* Rita Zajacz examines how early twentieth century American policymakers sought to gain control over radiotelegraphy networks in an effort to advance the global position of the United States Doing so she develops an analytical framework for understanding the struggle for network control that can be applied not only to American attempts to establish a global radio network in the early twentieth century but also to current US efforts to retain control of the internet In the late nineteenth century Britain was seen to control both the high seas and the global cable communication network under the sea By the turn of the twentieth century Britain's geopolitical rivals including the United States looked to radiotelegraphy that could circumvent Britain's dominance Zajacz traces policymakers attempts to grapple with both a new technology radiotelegraphy and a new corporate form the multinational corporation which managed the network and acted as a crucial intermediary She argues that both foreign policy and domestic radio legislation were shaped by the desire to harness radiotelegraphy for geopolitical purposes and reveals how communication policy and aspects of the American legal system adjusted to the demands of a rising power The United States was a reluctant power during the early twentieth century because policymakers were unsure that companies headquartered in the United States were sufficiently American and doubted that their strategies served the national interest The 21st-Century Voter Guido H.
