Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of Congress, at Washington. Under the Copyright Law ... Wherein the Copyright Has Been Completed by the Deposit of Two Copies in the Office Library of Congress. Copyright Office,1980 Technical Information Pilot ,1951 *Water Waves: The Mathematical Theory with Applications* James Johnston Stoker,2019-04-17 First published in 1957 this is a classic monograph in the area of applied mathematics It offers a connected account of the mathematical theory of wave motion in a liquid with a free surface and subjected to gravitational and other forces together with applications to a wide variety of concrete physical problems A never surpassed text it remains of permanent value to a wide range of scientists and engineers concerned with problems in fluid mechanics The four part treatment begins with a presentation of the derivation of the basic hydrodynamic theory for non viscous incompressible fluids and a description of the two principal approximate theories that form the basis for the rest of the book The second section centers on the approximate theory that results from small amplitude wave motions A consideration of problems involving waves in shallow water follows and the text concludes with a selection of problems solved in terms of the exact theory Despite the diversity of its topics this text offers a unified readable and largely self contained treatment Proceedings ,1952 Catalog of Copyright Entries. Fourth Series Library of Congress. Copyright Office,1980 Qualitative Analysis of Nonlinear Elliptic Partial Differential Equations Vicențiu Rădulescu,2008 This book provides a comprehensive introduction to the mathematical theory of nonlinear problems described by elliptic partial differential equations These equations can be seen as nonlinear versions of the classical Laplace equation and they appear as mathematical models in different branches of physics chemistry biology genetics and engineering and are also relevant in differential geometry and relativistic physics Much of the modern theory of such equations is based on the calculus of variations and functional analysis Concentrating on single valued or multivalued elliptic equations with nonlinearities of various types the aim of this volume is to obtain sharp existence or nonexistence results as well as decay rates for general classes of solutions Many technically relevant questions are presented and analyzed in detail A systematic picture of the most relevant phenomena is obtained for the equations under study including bifurcation stability asymptotic analysis and optimal regularity of solutions The method of presentation should appeal to readers with different backgrounds in functional analysis and nonlinear partial differential equations All chapters include detailed heuristic arguments providing thorough motivation of the study developed later on in the text in relationship with concrete processes arising in applied sciences A systematic description of the most relevant singular phenomena described in this volume includes existence or nonexistence of solutions unicity or multiplicity properties bifurcation and asymptotic analysis and optimal regularity The book includes an extensive bibliography and a rich index thus allowing for quick orientation among the vast collection of literature on the mathematical theory of nonlinear phenomena described by elliptic partial differential equations **An Introduction to Microlocal**

Analysis Peter Hintz, 2025-10-06 Microlocal analysis provides a powerful versatile and modular perspective on the analysis of linear partial differential equations This text developed from a first year graduate course provides an accessible introduction and develops from first principles the core notions and results including pseudodifferential operators wave front sets and propagation phenomena The reader is assumed to have some exposure to functional analysis and the theory of smooth manifolds With detailed proofs a wealth of exercises of varying levels of difficulty and connections to contemporary research in general relativity the book serves as both a comprehensive textbook for graduate students and a useful reference for researchers **American Journal of Mathematics** ,1968 **Advances in Visual Data Compression and**

Communication Feng Wu, 2014-07-25 This book provides a theoretical and technical basis for advanced research on visual data compression and communication It presents the results of the author s research on visual data compression and transmission Studying scalable video coding SVC it considers the fundamental problem to be solved in SVC motion compensation It explores directional transforms extends the current coding framework by visual synthesis and reconstruction and explains how to apply compressive sensing to solve the compression problems in transmission It also develops the pseudo analog transmission for image and video *Optimized-Motion Planning* Cherif Ahrikencheikh, Ali A.

Seireg, 1994-10-14 The first handbook to the practical specifics of motion planning *Optimized Motion Planning* offers design engineers methods and insights for solving real motion planning problems in a 3 dimensional space Complete with a disk of software programs this unique guide allows users to design test and implement possible solutions useful in a host of contexts especially tool path planning Beginning with a brief overview of the general class of problems examined within the book as well as available solution techniques Part 1 familiarizes the reader with the conceptual threads that underlie each approach This early discussion also considers the specific applications of each technique as well as its computational efficiency Part 2 illustrates basic problem solving methodology by considering the case of a point moving between stationary polygons in a plane This section features algorithms for data organization and storage the concepts of passage networks and feasibility charts as well as the path optimization algorithm Elaborating on the problematic model described in Part 2 Part 3 develops an algorithm for optimizing the motion of a point between stationary polyhedra in a 3 dimensional space This algorithm is first applied to the case of nonpoint objects moving between obstacles that can be stationary or moving with known patterns It s then used in connection with the extensively investigated problem of motion planning for multilink manipulators

Applied Multidimensional Systems Theory Nirmal K. Bose, 2016-12-24 Revised and updated this concise new edition of the pioneering book on multidimensional signal processing is ideal for a new generation of students Multidimensional systems or m D systems are the necessary mathematical background for modern digital image processing with applications in biomedicine X ray technology and satellite communications Serving as a firm basis for graduate engineering students and researchers seeking applications in mathematical theories this edition eschews detailed mathematical theory not useful to

students Presentation of the theory has been revised to make it more readable for students and introduce some new topics that are emerging as multidimensional DSP topics in the interdisciplinary fields of image processing New topics include Groebner bases wavelets and filter banks *Technical Report -- Hydrodynamics Laboratory, Massachusetts Institute of Technology* Massachusetts Institute of Technology.
