Community Operational Research Or And Systems Thinking For Community Development:

Community Operational Research Gerald Midgley, Alejandro Ochoa-Arias, 2004-06-15 This is the book I have been waiting for Community Operational Research has shown that analysis can be used not only for but also with community groups helping them to gain more control of their situations What Midgley and Ochoa Arias volume does is provide not only rich examples of grass roots practice but also thought provoking theoretical explorations The editors have a point of view but they allow space for debate with those who interpret Community OR differently Jonathan Rosenhead Emeritus Professor of Operational Research London School of Economics and Political Science Ex President of the ORS

Ecofeminism and Systems Thinking Anne Stephens, 2013-07-18 This book brings together two vitally important strands of 20th century thinking to establish a set of simple and elegant principles for planning project design and evaluation It explains the backgrounds of cultural ecofeminism and critical systems thinking and what we find when they are systematically compared Both theories share a range of concepts have a strong social justice ethic and challenge the legacy of modernity The book takes theory into practice The value of the emergent principles of feminist systems thinking are described and demonstrated through four chapters of case studies in community development settings The principles can be used to influence project design and outcomes across a range of disciplines including project management policy health education and community development This book has much to offer practitioners who seek to create more socially just and equitable project and research outcomes

Immersive Systemic Knowing Raghav Rajagopalan, 2020-10-16 This book advances systems thinking by introducing a new philosophy of systemic knowing It argues that there are inescapable limits to rational understanding Humankind has always depended on extended ways of knowing to complement the rational analytic approach The book establishes that the application of such methods is fundamental to systemic practice The author advocates embracing two modes of consciousness intentionality which Western philosophy has long recognized and non intentional awareness which Eastern philosophy additionally highlights The simultaneity of these two modes of consciousness and the variety of knowings they spawn are harnessed for a more holistic systemic knowing Four practices from fields related to systems thinking are examined two contemporary action research methodologies from the US and the UK the Sumedhian Indian approach to inquiry about processes within groups and a technique of group psychotherapy originating in Eastern Europe Each of these systematically harnesses knowing using both modes of consciousness Therefore the author insists such approaches must be included in systemic practice in purposeful and methodical juxtaposition to rational analytic ways The book provides examples and guidelines for deployment All researchers and practitioners of systems thinking and action research must read this book Raghav has craftfully blended Eastern and Western wisdom He uses his immersion into Eastern ways of knowing practically to elaborate the systems philosophy in rich detail He has incorporated from cooperative inquiry as action research the idea of four ways of knowing practical propositional presentational and experiential to bolster the foundations of systems

thinking SHANKAR SANKARAN Professor University of Technology Sydney Australia President International Society of Systems Sciences ISSS 2019 2020 This is a book with the potential to stimulate the emergence of a new paradigm Raghav shows that systems thinking can transcend rational analysis and incorporate other ways of knowing such as arts based methods also rather than be overly preoccupied with striving for change there is value in simply abiding which comes with a deep appreciation of the ecological relationships we are part of It is not that rational analysis is wrong it is that it is only part of a genuinely transformative practice GERALD MIDGLEY Co Director Centre for Systems Studies University of Hull former President ISSS 2013 14 Raghav Rajagopalan's writing on generating deep appreciation for the social and ecological interdependencies ties in closely with my own work The philosophical ideas he develops contain the tracings and essential tones of Gregory Bateson's idea of Mind as a process of living complexities reaching well beyond the notion of the body This book demonstrates outstanding erudition and deep compassion at the same time It should delight the adventurous reader unafraid of big questions NORA BATESON President of the International Bateson Institute **Systems Thinking and Complexity Science** Kurt Anders Richardson, Kurt Antony Richardson, Wendy J.
