

COMPACT JAMMING SYSTEM (CJS)

COMPACT, ADVANCED AND FLEXIBLE DRFM JAMMER FOR POD, PYLON AND MULTI-PLATFORM AIRCRAFT TYPE ON-BOARD INTEGRATION

The global proliferation of advanced ground and air based threat systems is increasing threat levels, reducing freedom of manoeuvre and giving potential opponents a significant Anti-Access Area Denial (A2AD) capability.

Developing from the success of recent systems and drawing from our rich heritage, the CJS is a Digital Radio Frequency Memory (DRFM) combined with an associated techniques generator, receive antennas, transmitters and power hardware in to a very compact form factor. It provides a complete self-contained jamming capability able to counter the most advanced new threats.

The small size, high power output and modular nature of the CJS enable it to be utilised for multiple purposes. It can be incorporated into pods, pylons, off-board long range autonomous platforms, or fully integrated into numerous aircraft types.

This allows us to offer partners the ability to create bespoke sovereign ECM solutions that directly answer the in-specific EW needs. The CJS can be integrated onto existing national assets or new platforms providing an immediate high-end DRFM based jamming capability to customer forces, offering technological synergies and rapid access to world class levels of RF protection.

Gleason's Theorem and Its Applications Anatolij Dvurecenskij, 2013-06-29 For many years physics and mathematics have had a fruitful influence on one another Classical mechanics and celestial mechanics have produced very deep problems whose solutions have enhanced mathematics On the other hand mathematics itself has found interesting theories which then sometimes after many years have been reflected in physics confirming the thesis that nothing is more practical than a good theory The same is true for the younger physical discipline of quantum mechanics In the 1930s two events not at all random became The mathematical back grounds of both quantum mechanics and probability theory In 1936 G Birkhoff and J von Neumann published their historical paper The logic of quantum mechanics in which a quantum logic was suggested The mathematical foundations of quantum mechanics remains an outstanding problem of mathematics physics logic and philosophy even today The theory of quantum logics is a major stream in this axiomatic knowledge river where $L(H)$ the system of all closed subspaces of a Hilbert space H due to J von Neumann plays an important role When A M Gleason published his solution to G Mackey's problem showing that any state probability measure corresponds to a density operator he probably did not anticipate that his solution would become a cornerstone of axiomatic theory of quantum mechanics nor that it would provide many interesting applications to mathematics
