Generating Public Sector Resources to Finance Sustainable Development Stefano Pagiola, 2002 Annotation This specific objective of this book is to explore potential avenues for generating more resources for the public sector to invest in sustainable development European Integration and Income Convergence Carmela Martín, 2001

The prospect of enlarging the European Union EU to Central and Eastern European countries with income levels far below those of present members questions how and when the candidates aspiration to converge towards EU standards of living could possibly be fulfilled To address these questions this paper seeks to assess of the convergence experience of the four less

developed EU members i.e. Spain Portugal Ireland and Greece after joining the EU and to explore what lessons can be learned from that experience The discussion suggests that while theoretically possible there is little empirical reason to fear that European integration would cause economies to diverge Rather than being spontaneous however real convergence would seem to depend crucially on the capacity of countries to tap international technological spillovers particularly through foreign direct investment Macroeconomic stability effective competition on goods and factor markets and a good human capital endowment are essential to harness benefits Nonetheless lingering worries about the possibility that integration would lead to real divergence between countries or regions of Europe has led to the creation of large transfers under the EU's Regional Policy Pending more conclusive evidence of their effectiveness the candidate countries would seem wise to put greater store by those domestic policies than by EU grants to fuel their convergence

Survey of communal infrastructure investment needs in Slovenia Mojmir Mrak,1999 *Institutional Elements of Tax Design and Reform* John McLaren,2002-12-31 This is a collection of papers that study the constraints on fiscal systems imposed by problems of institutions administration and incentives in developing and post Socialist economies Chapter two focuses on the administration of indirect taxation and provides a case study of indirect taxation in Tanzania This shows how evasion can be documented and quantified through a case study that looks at a particular type of reform aimed at curbing evasion franchising or privatizing the right to tax which has been tried in several Tanzanian towns as a way of collecting vendor fees for access to a public market Chapter three is a theoretical study of evasion under a value added tax VAT and the inefficiencies it can create Chapter four studies the fiscal constraints within the federal politics of Russia while Chapters five and six examine case studies India in fiscal federalism in which the determination of fiscal outcomes is to a considerable degree a matter of bargaining between political entities in the center and in the periphery In both cases it appears that large scale distortions away from an ideal tax system emerge as a result suggesting corruption can be fought by increasing functional specialization within a tax bureaucracy The last chapter looks at the problem of opportunistic taxation particularly regarding the African context and studies various ways in which the problem can be alleviated Publications Update World Bank,1996 **Bibliographic Guide to Slavic, Baltic, and Eurasian Studies** ,2000 Services Trade in the Balkans Constantine Michalopoulos,Vasileios Panousopoulos,2002 This study aims at providing an overview of policies affecting services trade in seven countries of the Balkan region and stresses the growing importance of services trade The service sectors particularly tourism and transport play an important role in the economies of the Balkan countries The paper finds that on average the countries involved are committed to a liberal trade regime for services and that they have made more commitments to liberalize services in the World Trade Organization WTO than developing countries at comparable levels of development For the future the paper encourages further liberalization at the regional level on a Most Favoured Nation MFN basis as well as policy harmonization with the European Union **Urban Water Resources Toolbox** Leif Wolf,Brian

Morris, Stewart Burn, 2007-01-19 Holistic but applicable approaches are urgently needed to help plan long term cost effective and sustainable urban water management systems Groundwater is a central element in the urban water cycle of all cities located on aquifers yet it remains inadequately integrated into urban water management practices This book describes holistic approaches for quantification and balancing of urban water and solute fluxes that have been developed by the joint Euro Australian research project AISUWRS The new tools comprise a chain of interconnected models that link urban water supply urban drainage and urban groundwater resources These include a new sewer exfiltration model that is based on pipe asset conditions which permits flows to the environment to be estimated The book provides details on the further processing of this information through the unsaturated zone down to aquifer where numerical groundwater flow and transport models are applied Concise documentation is provided on each of the models The practicability of applying the chain of models was tested by applying it in four case study cities in Australia Germany Slovenia and the United Kingdom that have diverse conditions in terms of hydrogeologic setup climate and data availability This permitted additional validation by field investigations including problem oriented monitoring campaigns aimed at assessing the impact of wastewater practice on groundwater The book provides guidance and examples of the application of multilevel piezometers on adapted monitoring strategies and the use for interpretation purposes of microbiological parameters pharmaceutical residues and related marker species The socio economic analysis in the case study cities sometimes uncovered distinctively different problem perceptions and priorities both in the groups of experts responsible for the water management and with the remaining stakeholders The AISUWRS project has developed tools to foster these urgently required deliberation processes Methodologies for formal sustainability assessment with a triple bottom line background were also elaborated and tested during the case studies The case studies have shown that the approach is valid and constitutes an important step towards integrated urban water management
