Environment, Media and Communication Anders Hansen, 2018-09-21. Media and communication processes are central to how we come to know about and make sense of our environment and to the ways in which environmental concerns are generated, elaborated, manipulated and contested. The second edition of *Environment, Media and Communication* builds on the first edition's framework for analysing and understanding media and communication roles in the politics of the environment. It draws on the significant and continuing growth and advances in the field of environmental communication research to show the increasing diversification and complexity of environmental communication. The book highlights the persistent urgency of analysing and understanding how communication about the environment is being influenced and manipulated, with implications for how and indeed whether environmental challenges are being addressed and dealt with. Since the first edition, changes in media organisations, news media and environmental journalism have continued apace, but perhaps more significantly, the media technologies and the media and communications landscape have evolved profoundly with the continued rise of digital and social media. Such changes have gone hand in hand with and often facilitated, enabled and enhanced shifting balances of power in the politics of the environment. There is thus a greater need than ever to analyse and understand the roles of mediated public communication about the environment and to ask critical questions about who what benefits and who what is adversely affected by such processes. This book will be of interest to students in media communication studies, geography, environmental studies, political science and sociology, as well as to environmental professionals and activists.
