Communicating (with) Care Sarah Bigi, 2016-08-15 At the start of studies on health communication scholars were primarily concerned with showing the ethical implications of a new approach to care and with collecting evidence to demonstrate its greater effectiveness as opposed to the paternalistic and mechanistic paradigms Well into the second decade of the 21st century different issues need to be addressed Aging populations and the spread of chronic diseases are challenging the sustainability of health care systems worldwide increased awareness of health issues among the population and greater citizen participation seem to threaten clinicians authority In this new scenario it is acknowledged that the quality of verbal communication plays a crucial role but it is still not clear how it impacts on the outcomes of care which are its constitutive components and how it interacts with the institutional cultural and social context of interactions This book suggests that the time is ripe for a fresh start in health communication studies As Debra Roter points out in her foreword this proposal is ambitious in attempting to integrate perspectives derived from pragmatics and argumentation theory with those derived from quantitative methods of medical interaction analysis and its prediction of outcomes On the other hand as Giovanni Gobber explains in his foreword health communication can profit from an application of a performance oriented linguistic analysis that pays attention to the role of the various relevant context factors in speech events related to specific activity types In this way the open questions regarding communication in medical encounters are considered under a new light The answers provided open up novel lines of research and provide an original perspective to face the new challenges in medical care

Communication in Medical Care John Heritage, Douglas W. Maynard, 2006-07-06 This 2006 volume provides a comprehensive discussion of communication between doctors and patients in primary care consultations It brings together a team of leading contributors from the fields of linguistics sociology and medicine to describe each phase of the primary care consultation identifying the distinctive tasks goals and activities that make up each phase of primary care as social interaction Using conversation analysis techniques the authors analyze the sequential unfolding of a visit and describe the dilemmas and conflicts faced by physicians and patients as they work through each of these activities The result is a view of the medical encounter that takes the perspective of both physicians and patients in a way that is both rigorous and humane Clear and comprehensive this book will be essential reading for students and researchers in sociolinguistics communication studies sociology and medicine

Physician Communication with Patients Jon Christianson,Louise H. Warrick,Michael Finch,Wayne B. Jonas,2012-08-27 We all have a good idea of how we want things to go when we visit a physician We expect to be able to explain why we are there and we hope the physician will listen and possibly ask questions that help us clarify our thoughts Most of us hope that the physician will provide some expression of empathy offer a clear nontechnical assessment of our problem and describe next steps in a way that is easy to understand Ideally we would like to be asked about our ability to follow treatment recommendations Some experts say that these expectations are not only reasonable but even necessary if patients are to get the care they need Yet there is a growing body of research that suggests the reality of physician

communication with patients often falls short of this ideal in many respects. A careful analysis of the findings of this research can provide guidance to physician educators, health care administrators and health policy makers interested in understanding the role that improved physician communication can play in improving quality of care and patient outcomes. *Physician Communication with Patients* summarizes findings from the academic literature pertaining to various aspects of this question, discussing those findings in the context of current pressures for change in the organization and delivery of medical services.

Making the Patient Your Partner W. Sterling Edwards, 1997-07-30 Health professionals need to learn the communication skills that will create collaborative and mutually satisfying relationships with patients. The failure of doctors to relate effectively to patients results in noncompliance, malpractice suits, longer stays in hospitals and other negative outcomes. Interpersonal skills can be easily learned by studying the techniques described by Gordon and Edwards. Using cases, interviews, dialogues and vignettes, the authors provide effective models or blueprints for health professionals to follow. Gordon is a psychologist who has pioneered internationally recognized effectiveness training programs widely used by teachers, parents, salesmen, managers and other professionals. He has published six books that have sold over five million copies in 17 languages. In this work, he has enlisted the expertise of Edwards, a highly respected medical doctor and educator, to provide the necessary insider's view of the health profession. Together, they make a convincing case for doctors to develop closer and more collaborative relationships with patients.

Multilingual Healthcare Christiane Hohenstein, Magdalène Lévy-Tödter, 2020-03-28 This volume is the first to address multilingual healthcare communication around the globe and focuses on institutional, social and linguistic challenges and resources of the healthcare industry. It comprises studies from Canada, Australia, South Africa, Greenland, Italy, Germany, Switzerland and Belgium and aims to introduce new paths of communicative and methodological agendas, casting a critical view on current linguistic practices in healthcare, nursing and medical interactions. With increased personal mobility in a global society, the need for multilingual staff is on the rise in medical institutions and healthcare organisations, and communicative competencies and practices involving different languages pose challenges for medical doctors, healthcare staff and patients alike. Many studies have highlighted the crucial role played by interpreters and interpreting staff, but the diversity of language situations in different countries requires very different approaches and solutions. Additionally, it may not be possible to develop a single agenda of language services for different medical areas with different needs for counselling with various forms of treatment that require explanation and the patient's informed consent and with varying approaches to the relationship between medical professionals and patients. How to best organise medical digital language services in countries as different as South Africa, Greenland, Germany, Belgium and Australia calls for a diversity of possible solutions. The current volume makes a variety of such solutions and practices available for medical staff and healthcare institutions faced with international patients and working with international medical staff. It makes the challenges palpable on an international scale in a way that comparisons may be drawn between

different solutions as well as their socio cultural and institutional implications This volume is intended for policy makers medical and healthcare practitioners institutions interpreters teachers and students in professional multilingual healthcare
