Communication And Aging:

Communication and Aging Jon F. Nussbaum, Loretta L. Pecchioni, James D. Robinson, Teresa L. Thompson, 2013-05-13

This text employs a communication perspective to examine the aging process and the ability of individuals to adapt successfully to aging. It continues the groundbreaking work of the first edition emphasizing a life span approach toward understanding the social interaction that occurs during later life. The edition provides a comprehensive update on the existing and emerging research within communication and aging studies and considers such topics as notions of successful aging, positive and negative stereotypes toward older adults and health communication issues. It raises awareness of the barriers facing elderly people in conversation and the importance such conversations have in elderly people's lives. The impact of nonrelational processes such as hearing loss are considered as they impact relationships with others and affect the ability to age successfully. The book is organized into 14 chapters. Each chapter is written so that the reader is presented with an exhaustive review of the pertinent and recent literature from the social sciences. As in the first edition when the literature is empirically based, the communicative ramifications are then discussed. Readers of this volume will gain greater understanding of the importance of their communicative relationships and how significant they remain across the life span. Developed for students in communication, psychology, nursing, social gerontology, sociology and related areas, **Communication and Aging** provides important insights on communication to all who are affected by the aging process.

Handbook of Communication and Aging Research Jon F. Nussbaum, Justine Coupland, 2004-04-12 This second edition of the **Handbook of Communication and Aging Research** captures the ever changing and expanding domain of aging research. Since it was first recognized that there is more to social aging than demography, gerontology has needed a communication perspective. Like the first edition, this handbook sets out to demonstrate that aging is not only an individual process but an interactive one. The study of communication can lead to an understanding of what it means to grow old. We may age physiologically and chronologically but our social aging, how we behave as social actors toward others and even how we align ourselves with or come to understand the signs of difference or change as we age, are phenomena achieved primarily through communication experiences. Synthesizing the vast amount of research that has been published on communication and aging in numerous international outlets over the last three decades, the book's contributors include scholars from North America and the United Kingdom who are active researchers in the perspectives covered in their particular chapter. Many of the chapters work to deny earlier images of aging as involving normative decrement to provide a picture of aging as a process of development involving positive choices and providing new opportunities. A recurring theme in many chapters is that of the heterogeneity of the group of people who are variously categorized as older, aged, elderly or over 65. The contributors review the literature analytically in a way that reveals not only current theoretical and methodological approaches to communication and aging research but also sets the future agenda. This handbook will be of great interest to scholars and researchers in gerontology.
