Communication Complexity A New Approach To Circuit Depth:

Communication Complexity Mauricio Karchmer, 1989-07-01 Communication Complexity describes a new intuitive model for studying circuit networks that captures the essence of circuit depth. Although the complexity of boolean functions has been studied for almost 4 decades, the main problems—the inability to show a separation of any two classes or to obtain nontrivial lower bounds—remain unsolved. The communication complexity approach provides clues as to where to look for the heart of complexity and also sheds light on how to get around the difficulty of proving lower bounds. Karchmer's approach looks at a computation device as one that separates the words of a language from the non words. It views computation in a top-down fashion, making explicit the idea that flow of information is a crucial term for understanding computation. Within this new setting, Communication Complexity gives simpler proofs to old results and demonstrates the usefulness of the approach by presenting a depth lower bound for st-connectivity. Karchmer concludes by proposing open problems which point toward proving a general depth lower bound. Mauricio Karchmer received his doctorate from Hebrew University and is currently a Postdoctoral Fellow at the University of Toronto. Communication Complexity received the 1988 ACM Doctoral Dissertation Award.

Foundations of Software Technology and Theoretical Computer Science Rudrapatna K. Shyamasundar, 1993-11-23 For more than a decade, Foundations of Software Technology and Theoretical Computer Science Conferences have been providing an annual forum for the presentation of new research results in India and abroad. This year, 119 papers from 20 countries were submitted. Each paper was reviewed by at least three reviewers, and 33 papers were selected for presentation and included in this volume, grouped into parts on type theory, parallel algorithms, term rewriting, logic and constraint logic programming, computational geometry and complexity, software technology, concurrency, distributed algorithms and algorithms and learning theory. Also included in the volume are the five invited papers presented at the conference.
