Compact Complex Surfaces Series Of Modern Surveys In Mathematics:

Compact Complex Surfaces W. Barth, K. Hulek, Chris Peters, A. van de Ven, 2003-11-13 In the 19 years which passed since the first edition was published several important developments have taken place in the theory of surfaces The most sensational one concerns the differentiable structure of surfaces Twenty years ago very little was known about differentiable structures on 4 manifolds but in the meantime Donaldson on the one hand and Seiberg and Witten on the other hand have found inspired by gauge theory totally new invariants Strikingly together with the theory explained in this book these invariants yield a wealth of new results about the differentiable structure of algebraic surfaces Other developments include the systematic use of nef divisors in accordance with the progress made in the classification of higher dimensional algebraic varieties a better understanding of Kahler structures on surfaces and Reid's new approach to adjoint mappings All these developments have been incorporated in the present edition though the Donaldson and Seiberg Witten theory only by way of examples Of course we use the opportunity to correct some minor mistakes which we either have discovered ourselves or which were communicated to us by careful readers to whom we are much obliged

Modern Geometry Vicente Muñoz, Ivan Smith, Richard P. Thomas, 2018-09-05 This book contains a collection of survey articles of exciting new developments in geometry written in tribute to Simon Donaldson to celebrate his 60th birthday Reflecting the wide range of Donaldson's interests and influence the papers range from algebraic geometry and topology through symplectic geometry and geometric analysis to mathematical physics Their expository nature means the book acts as an invitation to the various topics described while also giving a sense of the links between these different areas and the unity of modern geometry

The Cremona Group and Its Subgroups Julie Déserti, 2021-04-13 The goal of this book is to present a portrait of the n -dimensional Cremona group with an emphasis on the 2 dimensional case After recalling some crucial tools the book describes a naturally defined infinite dimensional hyperbolic space on which the Cremona group acts This space plays a fundamental role in the study of Cremona groups as it allows one to apply tools from geometric group theory to explore properties of the subgroups of the Cremona group as well as the degree growth and dynamical behavior of birational transformations The book describes natural topologies on the Cremona group codifies the notion of algebraic subgroups of the Cremona groups and finishes with a chapter on the dynamics of their actions This book is aimed at graduate students and researchers in algebraic geometry who are interested in birational geometry and its interactions with geometric group theory and dynamical systems

Partition Functions and Automorphic Forms Valery A. Gritsenko, Vyacheslav P. Spiridonov, 2020-07-09 This book offers an introduction to the research in several recently discovered and actively developing mathematical and mathematical physics areas It focuses on 1 Feynman integrals and modular functions 2 hyperbolic and Lorentzian Kac Moody algebras related automorphic forms and applications to quantum gravity 3 superconformal indices and elliptic hypergeometric integrals related instanton partition functions 4 moonshine its arithmetic aspects Jacobi forms elliptic

genus and string theory and 5 theory and applications of the elliptic Painleve equation and aspects of Painleve equations in quantum field theories All the topics covered are related to various partition functions emerging in different supersymmetric and ordinary quantum field theories in curved space times of different $d \geq 3$ dimensions Presenting multidisciplinary methods localization Borchers products theory of special functions Cremona maps etc for treating a range of partition functions the book is intended for graduate students and young postdocs interested in the interaction between quantum field theory and mathematics related to automorphic forms representation theory number theory and geometry and mirror symmetry *Sharp Bound on Abelian Automorphism Groups of Surfaces of General Type* Xin L \diamond , Sheng-Li Tan, 2025-08-01
