 Compact Riemann Surfaces R. Narasimhan,1992-09-01 *Compact Riemann Surfaces* R. Narasimhan,1992-09-01 The lecture notes forming a course given by the author at the Eidgenossische Technische Hochschule Zurich from November 1984 to February 1985 Presents the basic theorems about the Jacobian from Riemann s own point of view Annotation copyrighted by Book News Inc Portland OR Moduli Spaces of Riemann Surfaces Matthew Petro,2008 **Compact Riemann Surfaces** Raghavan Narasimhan,1992 *Dynamics: Topology and Numbers* Pieter Moree,Anke Pohl,L'ubomír Snoha,Tom Ward,2020-02-12 This volume contains the proceedings of the conference Dynamics Topology and Numbers held from July 2 6 2018 at the Max Planck Institute for Mathematics Bonn Germany The papers cover diverse fields of mathematics with a unifying theme of relation to dynamical systems These include arithmetic geometry flat geometry complex dynamics graph theory relations to number theory and topological dynamics The volume is dedicated to the memory of Sergiy Kolyada and also contains some personal accounts of his life and mathematics The p-Harmonic Equation and Recent Advances in Analysis Pietro Poggi-Corradini,2005 Comprised of papers from the IIIrd Prairie Analysis Seminar held at Kansas State University this book reflects the many directions of current research in harmonic analysis and partial differential equations Included is the work of the distinguished main speaker Tadeusz Iwaniec his invited guests John Lewis and Juan Manfredi and many other leading researchers The main topic is the so called p harmonic equation which is a family of nonlinear partial differential equations generalizing the usual Laplace equation This study of p harmonic equations touches upon many areas of analysis with deep relations to functional analysis potential theory and calculus of variations The material is suitable for graduate students and research mathematicians interested in harmonic analysis and partial differential equations **Lectures on Algebraic Quantum Groups** Ken Brown,Ken R. Goodearl,2012-12-06 In September 2000 at the Centre de Recerca Matematica in Barcelona we pre sented a 30 hour Advanced Course on Algebraic Quantum Groups After the course we expanded and smoothed out the material presented in the lectures and inte grated it with the background material that we had prepared for the participants this volume is the result As our title implies our aim in the course and in this text is to treat selected algebraic aspects of the subject of quantum groups Sev eral of the words in the previous sentence call for some elaboration First we mean to convey several points by the term algebraic that we are concerned with algebraic objects the quantized analogues of classical algebraic objects in contrast for example to quantized versions of continuous function algebras on compact groups that we are interested in algebraic aspects of the structure of these objects and their representations in contrast for example to applications to other areas of mathematics and that our tools will be drawn primarily from noncommutative algebra representation theory and algebraic geometry Second the term quantum groups itself This label is attached to a large and rapidly diversifying field of mathematics and mathematical physics originally launched by developments around 1980 in theoretical physics and statistical me chanics It is a field driven much

more by examples than by axioms and so resists attempts at concise description but see Chapter 1 1 and the references therein   *Ten Lectures on Random Media* Erwin Bolthausen,Alain-Sol Sznitman,2012-12-06 The following notes grew out oflectures held during the DMV Seminar on Random Media in November 1999 at the Mathematics Research Institute of Oberwolfach and in February March 2000 at the Ecole Normale Superieure in Paris In both places the atmosphere was very friendly and stimulating The positive response of the audience was encouragement enough to write up these notes I hope they will carryover the enjoyment of the live lectures I whole heartedly wish to thank Profs Matthias Kreck and Jean Franc ois Le Gall who were respon sible for these two very enjoyable visits Laurent Miclo for his comments on an earlier version of these notes and last but not least Erwin Bolthausen who was my accomplice during the DMV Seminar A Brief Introduction The main theme of this series of lectures are Random motions in random me dia The subject gathers a variety of probabilistic models often originated from physical sciences such as solid state physics physical chemistry oceanography biophysics in which typically some diffusion mechanism takes place in an inho mogeneous medium Randomness appears at two levels It comes in the description of the motion of the particle diffusing in the medium this is a rather traditional point of view for probability theory but it also comes in the very description of the medium in which the diffusion takes place   **Evolution Equations, Semigroups and Functional Analysis** Alfredo Lorenzi,Bernhard Ruf,2012-12-06 Brunello Terreni 1953 2000 was a researcher and teacher with vision and dedication The present volume is dedicated to the memory of Brunello Terreni His mathematical interests are reflected in 20 expository articles written by distinguished mathematicians The unifying theme of the articles is evolution equations and functional analysis which is presented in various and diverse forms parabolic equations semigroups stochastic evolution optimal control existence uniqueness and regularity of solutions inverse problems as well as applications Contributors P Acquistapace V Barbu A Briani L Boccardo P Colli Franzone G Da Prato D Donatelli A Favini M Fuhrmann M Grasselli R Illner H Koch R Labbas H Lange I Lasiecka A Lorenzi A Lunardi P Marcati R Nagel G Nickel V Pata M M Porzio B Ruf G Savar R Schnaubelt E Sinestrari H Tanabe H Teismann E Terraneo R Triggiani A Yagi   Revue Roumaine de Mathématiques Pures Et Appliquées ,2000   Gradient Flows Luigi Ambrosio,Nicola Gigli,Giuseppe Savare,2005-01-28 This book is devoted to a theory of gradient ows in spaces which are not nec sarily endowed with a natural linear or di erentiable structure It is made of two parts the rst one concerning gradient ows in metric spaces and the second one 2 1 devoted to gradient ows in the L Wasserstein space of probability measures on p a separable Hilbert space X we consider the L Wasserstein distance p 1 as well The two parts have some connections due to the fact that the Wasserstein space of probability measures provides an important model to which the metric theory applies but the book is conceived in such a way that the two parts can be read independently the rst one by the reader more interested to Non Smooth Analysis and Analysis in Metric Spaces and the second one by the reader more oriented to theapplications in Partial Di erential Equations Measure Theory and Probability   **Moduli, Deformations, and Classifications of Compact Complex**
