Work Less Jon Peirce,2024-01-02 You can t have a healthy economy with an unhealthy work force Work Less proposes ways to reduce work hours and keep workers happier healthier and more productive Recent years have revealed just how stressed out many workers are While the trend to longer hours has been developing for several decades the trend s effects have been aggravated during the pandemic by the growing use of Zoom and other new technologies for meetings with clients customers and co workers Exhausted and fed up today s workers are starting to insist on shorter hours and greater flexibility as to where they do their work There is growing consensus that the forty hour week the norm since the 1940s has outlived its usefulness And there is an urgent need for new work schedules that adequately reflect the far greater intensity of work today as well as the greater family demands on a labour force made up of almost fifty percent women who bear the brunt of domestic duties Work Less offers practical scheduling suggestions to employers and workers and numerous policy options for government policy makers to improve working conditions **Manpower** ,1974 Short-Term Load Forecasting 2019 Antonio Gabaldón,María Carmen Ruiz-Abellón,Luis Alfredo Fernández-Jiménez,2021-02-26 Short term load forecasting STLF plays a key role in the formulation of economic reliable and secure operating strategies planning scheduling maintenance and control processes among others for a power system and will be significant in the future However there is still much to do in these research areas The deployment of enabling technologies e g smart meters has made high granularity data available

for many customer segments and to approach many issues for instance to make forecasting tasks feasible at several demand aggregation levels The first challenge is the improvement of STLF models and their performance at new aggregation levels Moreover the mix of renewables in the power system and the necessity to include more flexibility through demand response initiatives have introduced greater uncertainties which means new challenges for STLF in a more dynamic power system in the 2030 50 horizon Many techniques have been proposed and applied for STLF including traditional statistical models and AI techniques Besides distribution planning needs as well as grid modernization have initiated the development of hierarchical load forecasting Analogously the need to face new sources of uncertainty in the power system is giving more importance to probabilistic load forecasting This Special Issue deals with both fundamental research and practical application research on STLF methodologies to face the challenges of a more distributed and customer centered power system
