Proceedings of the 15th International Conference on Applied Human Factors and Ergonomics and the Affiliated Conferences Nice France 24-27 July 2024 *Emerging Technologies In Sustainable Innovation, Management and Development* R. Udaya Kumar, 2025-10-13 ICETSIMD 2025 was conceived as a vital platform for academicians, researchers and industry leaders. Its primary purpose was to explore the transformative potential of emerging technologies in driving sustainable development. To ensure the high quality, originality and relevance of the contributions, all submissions to the ICETSIMD 2025 conference underwent a rigorous double-blind peer review process. We received 300 manuscript submissions from which 100 were selected for inclusion in the conference proceedings. Each manuscript was evaluated by at least two independent experts based on criteria including scientific rigor, methodological soundness, clarity and contribution to the conference themes.

Data Science: New Issues, Challenges and Applications Gintautas Dzemyda, Jolita Bernatavičienė, Janusz Kacprzyk, 2020-02-13 This book contains 16 chapters by researchers working in various fields of data science. They focus on theory and applications in language technologies, optimization, computational thinking, intelligent decision support systems, decomposition of signals, model-driven development methodologies, interoperability of enterprise applications, anomaly detection in financial markets, 3D virtual reality, monitoring of environmental data, convolutional neural networks, knowledge storage, data stream classification and security in social networking. The respective papers highlight a wealth of issues in and applications of data science. Modern technologies allow us to store and transfer large amounts of data quickly. They can be very diverse: images, numbers, streaming related to human behavior and physiological parameters, etc. Whether the data is just raw numbers, crude images or will help solve current problems and predict future developments depends on whether we can effectively process and analyze it. Data science is evolving rapidly. However, it is still a very young field. In particular, data science is concerned with visualizations, statistics, pattern recognition, neurocomputing, image analysis, machine learning, artificial intelligence, databases and data processing, data mining, big data analytics and knowledge discovery in databases. It also has many interfaces with optimization, block chaining, cyber social and cyber physical systems, Internet of Things (IoT), social computing, high performance computing in memory, key-value stores, cloud computing, social computing, data feeds, overlay networks, cognitive computing, crowdsourcing, analysis, log analysis, container-based virtualization and lifetime value modeling. Again, all of these areas are highly interrelated. In addition, data science is now expanding to new fields of application: chemical engineering, biotechnology, building energy management, materials, microscopy, geographic research, learning analytics, radiology, metal design, ecosystem, homeostasis investigation and many others. **Digital Technologies in Modeling and Management: Insights in Education and Industry** Prakasha, G.
