Artificial Intelligence and Machine Learning Algorithms for Engineering Applications Krishan Arora,Himanshu Sharma,Aeidapu Mahesh,2025-09-16 This book comprehensively covers core algorithms and techniques used in artificial intelligence AI and machine learning ML for engineering applications It further explores the use of AI in civil and structural engineering quality control and product design Features Presents autonomous robots using onboard computing and artificial intelligence AI algorithms to process the data from their sensors and make real time decisions Discusses nature based optimization based computing techniques to enhance the computational speed for solving engineering problems Provides conceptual and practical knowledge about the design of modern computation techniques with advanced tools and methodologies Highlights the importance of using smart techniques including AI and ML in product design and development Covers time series analysis and forecasting in engineering robotic process automation and autonomous robots in manufacturing The text is primarily written for senior undergraduates graduate students and academic researchers in the fields of electrical engineering electronics and communications engineering computer science and engineering manufacturing engineering and environmental engineering *The Mind of Everyday* Petraq Papajorgji,Howard Moskowitz,2024-12-28 The advent of artificial intelligence AI is associated with relevant changes in how we live today AI has the potential to significantly enhance daily decision making by providing tailored data dependent insights and aiding in intricate analysis AI based systems will be around us helping and advising us in our everyday tasks However how well do these systems perform in their quest to replace the human brain A meter a procedure for comparing the outcomes obtained by artificial intelligence systems with those obtained by human systems is necessary to address this issue This meter is Mind Genomics a new emerging science that delves into the science of how we as humans organize and respond to information To evaluate whether there are differences in the results obtained by AI based systems and human based experiments based on Outer Psychophysics were designed and implemented Thus four experiments in crucial areas of our lives are selected and cover education family stress and environmental and governmental policies For each area a Mind Genomic experiment is designed defining four topics silos Then the elements contained in each of the silos were generated twice once by humans and then by an AI based system Evaluating both systems performance requires comparing the results obtained by both experiments The analysis of the study cases is disciplined rich in scientific tools and presented with methods Through a blend of theoretical exploration case studies and practical applications this book aims to inspire readers with the potential of the fusion of Mind Genomics and AI to empower innovation enhance user experiences and bring forth a more nuanced understanding of human thought Whether the reader is a student a researcher in the field of social and political sciences or simply curious about the evolving landscape of science and technology we hope this book will serve as an invitation to explore how we can harmonize human and machine intelligence to better navigate the complex world around us *The Jobs*

Crisis in India Raghavan Jagannathan, 2018-10-18 If you've read about self-driving cars, blockchain and the Internet of Things (IoT), registered for a massive open online course (MOOC), considered dealing in cryptocurrencies or asked Alexa to play your favourite song, the chances are you are one of the select few Indians adjusting to the reality of a brave new world driven by technology and automation. But somewhere you will also acknowledge the growing disquiet in society where there is job-deficient growth, rising farm distress and youths from different communities agitating for job reservations in government or the public sector. Like elsewhere on the globe, in India too, the worlds of those with skills to handle technology and those without are diverging. This book presents us with insights, explanations and possible solutions to the aggravating jobs crisis in India. Raghavan Jagannathan comprehensively and skillfully explains the various micro and macro factors that impact the overall job scenario, including the rise of the gig economy, the use of robots, new technologies and artificial intelligence (AI) that displace human labour on the shopfloor and in the services sector, and the economic uncertainties that lie ahead. Archaic labour laws designed to protect employees from exploitative employers are not helping matters at a time when capital is cheaper than ever. The world of long-term and predictable jobs and careers is shrinking. The only people who will benefit in this scenario are those who are willing to constantly upskill, relearn and relocate to improve their job and income prospects. The world is getting older demographically and older people always find the speed of change difficult to cope with. India, with its younger population, can do better, but government and business have not got their act together yet. *The Business Year: Abu Dhabi 2020* Peter Howson, 2020-04-20 As Ecuador and the world at large grapple with the emerging challenge of the COVID-19 pandemic, it is important not to forget the fundamentals of the Ecuadorian economy and the success stories of 2019 and the start of 2020. We believe contained within these pages is an accurate, balanced account of the state of the Ecuadorian economy as of publication, told through the words of the dozens of top public and private sector figures. The Business Year's country-specific publications, sometimes featuring over 150 face-to-face interviews, are among the most comprehensive annual economic publications available internationally. This 212-page publication covers green economy, finance, hydrocarbons, mining, agriculture, construction, industry, transport, education, health, ICT and tourism.
