Buildings and other public facilities can have very long and productive service lives providing efficient shelter and serving a wide range of activities. To do so however these facilities must be managed effectively in a manner consistent with key design decisions. A variety of political and technical obstacles to effective management raise the public's total cost of ownership for these facilities particularly when actions to deal with short term government budget deficits have long term high cost consequences. This book identifies obstacles to controlling the costs of ownership and suggests ways these obstacles can be overcome.

**Building Cost Planning for the Design Team** Jim Smith, David Jaggar, 2007-03-14

Cost Planning answers these questions and is crucial to the team working on the design and construction of a project. This introductory text on building economics and cost planning provides the reader with the fundamental skills and knowledge to operate as a building professional in the area of economic advice and decision making at the project level. Cost planning is not an esoteric area for specialists alone but a core skill for the whole design team. Starting from the environment in which cost planning and design activities take place the book works through the cost planning process in theory and practice discussing the issues involved from a design team and client perspective. With analysis of key concepts related to cost control such as life cycle costing, value management, cost modelling and accuracy and integration of estimating techniques the authors provide an unequalled introduction to a crucial aspect of professional construction management.

Seeley, 1972 **Building Cost Planning for the Design Team** Jim Smith, D M Jaggar, Peter Love, 2016-02-26 Cost management of all building projects has become increasingly important as clients in the public and private sector demand the highest quality cost planning services with accurate budgeting and cost control. All members of the design team must integrate their activities to ensure that a high quality project is delivered on time and within budget. This book considers building cost planning and cost control from the client and the design team's perspective where all decisions whether concerned with design cost, quality, time, value or sustainability are taken as being interrelated. The latest Royal Institute of British Architects (RIBA) Plan of Work and the New Rules of Measurement for Early Stage Estimating and Cost Planning issued by the Royal Institution of Chartered Surveyors (RICS) have been incorporated into this new text. The book follows the building design cost planning process from the crucial inception stages and then through all the design stages to the completion of the technical design contract documentation and the tender. It provides a template for good cost planning practice. An essential addition to this third edition is the introduction of integrated design and documentation processes captured in building Information modelling (BIM) on line cost databases and computerised methods of cost planning. The integrated approaches are explained and provide vital information and knowledge for practitioners involved in building projects. All stakeholders involved in development and design and client teams in public and private sector policy making and implementation need to understand the new approaches to design management processes and how cost planning and design approaches are adapting to using the new technology in practice. The interactive style using in text and review questions makes this ideal for students and practitioners alike in property, architecture, construction economics, construction management, real estate, engineering, facilities management and project management. *Cost Control* Ethan Rodriguez, AI, 2025-02-21 *Cost Control* delivers a comprehensive guide to mastering cost management and securing financial accountability crucial for any organization aiming for profitability and sustainability.
