Countering Bioterrorism:

Electrotechnologies for Countering Bioterrorism G. Mezei, 2002 **Countering Bioterrorism** National Research Council, Institute of Medicine, Committee on Science and Technology for Countering Terrorism, Panel on Biological Issues, 2003-01-03

The attacks of September 11 and the release of anthrax spores revealed enormous vulnerabilities in the U S public health infrastructure and suggested similar vulnerabilities in the agricultural infrastructure as well. The traditional public health response surveillance intelligence prevention detection response recovery and attribution is the paradigm for the national response not only to all forms of terrorism but also to emerging infectious diseases. Thus investments in research on bioterrorism will have enormous potential for application in the detection prevention and treatment of emerging infectious diseases that also are unpredictable and against which we must be prepared. The deciphering of the human genome sequence and the complete elucidation of numerous pathogen genomes our rapidly increasing understanding of the molecular mechanisms of pathogenesis and of immune responses and new strategies for designing drugs and vaccines all offer unprecedented opportunities to use science to counter bioterrorist threats. But these same developments also allow science to be misused to create new agents of mass destruction. Hence the effort to confront bioterrorism must be a global one.

Countering Bioterrorism makes the following recommendations:

- Recommendation 1 All agencies with responsibility for homeland security should work together to establish stronger and more meaningful working ties between the intelligence S T and public health communities.
- Recommendation 2 Federal agencies should work cooperatively and in collaboration with industry to develop and evaluate rapid sensitive and specific early detection technologies.
- Recommendation 3 Create a global network for detection and surveillance making use of computerized methods for real time reporting and analysis to rapidly detect new patterns of disease locally nationally and ultimately internationally. The use of high throughput methodologies that are being increasingly utilized in modern biological research should be an important component of this expanded and highly automated surveillance strategy.
- Recommendation 4 Use knowledge of complex biological patterns and high throughput laboratory automation to classify and diagnose infections in patients in primary care settings.
- Recommendation 5 USDA should create an agency for control and prevention of plant disease. This agency should have the capabilities necessary to deal effectively with biothreats.

Biological Threats and Terrorism Institute of Medicine, Board on Global Health, Forum on Emerging Infections, 2002-04-07

In the wake of September 11th and recent anthrax events our nation s bioterrorism response capability has become an imminent priority for policymakers researchers public health officials academia and the private sector. In a three day workshop convened by the Institute of Medicine s Forum on Emerging Infections experts from each of these communities came together to identify clarify and prioritize the next steps that need to be taken in order to prepare and strengthen bioterrorism response capabilities. From the discussions it became clear that of utmost urgency is the need to cast the issue of a response in an appropriate framework in order to attract the attention of

Congress and the public in order to garner sufficient and sustainable support for such initiatives No matter how the issue is cast numerous workshop participants agreed that there are many gaps in the public health infrastructure and countermeasure capabilities that must be prioritized and addressed in order to assure a rapid and effective response to another bioterrorist attack *Agriculture, Rural Development, and Related Agencies Appropriations for Fiscal Year 2001* United States.
