Corrosion Processes George Vachtsevanos,K. A. Natarajan,Ravi Rajamani,Peter Sandborn,2020-01-01 This book discusses relevant topics in field of corrosion from sensing strategies to modeling of control processes corrosion prevention detection of corrosion initiation prediction of corrosion growth and evolution to maintenance practices and return on investment Written by leading international experts it combines mathematical and scientific rigor with multiple case studies examples colorful images case studies and numerous references exploring the essentials of corrosion in depth It appeals to a wide readership including corrosion engineers managers students and industrial and government staff and can serve as a reference text for courses in materials mechanical and aerospace engineering as well as anyone working on corrosion processes      *Molecular Modeling of Corrosion Processes* Christopher D. Taylor,Philippe Marcus,2015-05-26 Presents opportunities for making significant improvements in preventing harmful effects that can be caused by corrosion Describes concepts of molecular modeling in the context of materials corrosion Includes recent examples of applications of molecular modeling to corrosion phenomena throughout the text Details how molecular modeling can give insights into the multitude of interconnected and complex processes that comprise the corrosion of metals Covered applications include diffusion and electron transfer at metal electrolyte interfaces Monte Carlo simulations of corrosion corrosion inhibition interrogating surface chemistry and properties of passive films Presents current challenges and likely developments in this field for the future      Surface Chemistry of Aqueous Corrosion Processes E. McCafferty,2015-02-17 This SpringerBrief utilizes a surface chemistry physical chemistry approach toward the study of aqueous corrosion processes The book starts with a timely and in depth review of Acid Base Properties of Surface Oxide Films Acid base properties are significant in various surface phenomena such as general and localized corrosion corrosion inhibition by organic molecules and the adhesion of organic polymers to oxide covered metals This review also discusses the relationship between the two measures of surface charge the isoelectric point of the oxide film and the potential of zero charge of the oxide covered metal Other topics included are capillarity and corrosion corrosion inhibition passivity of Fe Cr and Fe Cr Ni alloys the uptake of chloride Ions and the pitting of aluminum and the formation of water films on the iron oxide surface      Synchrotron Radiation, Cultural Heritage, Biomineralization Catherine Dejoie,Pauline Martinetto,Nobumichi Tamura,2024-11-01 Many areas of material science have been transformed by the use of synchrotron radiation X rays including the fields of cultural heritage materials and biomineralization This book presents a selection of contributions that illustrate recent developments and applications of these tools focused either on the main techniques used in the cultural heritage and biomineralization communities or on specific materials studying their intrinsic properties or how they change with time Each chapter can be read alone and each individually demonstrates the intimate links between materials and methods The chapters explore the main principles of

synchrotron radiation as well as techniques based on X ray absorption and diffraction and give an overview of how these approaches have developed in recent decades in the field of cultural heritage with specific examples such as ancient ceramics corrosion of iron based materials concrete used in Roman monuments and the biomineralization process in sea urchin spines

W. H. Ailor,1980      **Corrosion and Protection** Einar Bardal,2007-06-14 Corrosion is generally described as an attack on a metallic material by reaction with it s environment The corrosion of metallic materials causes large economic losses and is a high risk for accidents The cost of corrosion is great but it is possible to reduce this cost by a better employment of existing knowledge Providing a thorough contribution to knowledge distribution Bardal combines a description of practical corrosion processes and problems with a theoretical explanation of the various types and forms of corrosion with particular attention to the interaction between description and theory A well thought out introduction to corrosion science with excellent examples and useful tables of data Exremley well illustrated with 167 diagrams and photographs Contains extensive reference material utilising the latest international standards Vital emphasis is placed on the connections between practical problems and basic scientific principles Corrosion and Protection is an essential guide for engineering students particularly those with a limited background in chemistry such as mechanical marine and civil engineering students and also provides a valuable reference source for practicing engineers      **Chemistry for Engineers and Manufacturers: Chemistry of manufacturing processes** Bertram Blount,Arthur G.
