**High Energy Cosmic Rays** Todor Stanev, 2010-03-10 Cosmic rays are an essential part of the universe Their origin is related to many important astrophysical processes such as star formation stellar evolution supernova explosions and the state of interstellar matter in the Galaxy Cosmic Ray Physics reviews our present knowledge of cosmic rays describing how they are born in a wide range of cosmic processes how they are accelerated and how they interact with matter magnetic fields and radiation during their journey across the Galaxy The book also describes the detection of cosmic rays and the processes which take place both at the top and within the Earth's atmosphere The author also describes the very important area of the underground detection of very high energy cosmic rays and particles such as neutrinos The book is divided into two parts the first describing the standard model of cosmic rays and contemporary challenges and the second part dealing with very high energy cosmic rays that cannot be detected directly in satellite and balloon experiments and with gamma ray and neutrino astronomy It is in this particular aspect of the book that the greatest developments have taken place during the 5 years since the first edition was completed Consequently it is in the chapters cosmic ray showers their spectrum on high energy neutrinos and on gamma ray astronomy of this revised and updated 2nd edition that a considerable amount of new material has been incorporated with more minor revisions and updating taking place in the first part of the book Students and lecturers of advanced undergraduate courses on cosmic rays and astroparticle physics as well as post graduates and researchers will continue to find this book a valuable source of learning and reference Principles Of Radiation Interaction In Matter And Detection (2nd Edition) Claude Leroy, Pier-giorgio Rancoita, 2009-02-26 This book like its first edition addresses the fundamental principles of interaction between radiation and matter and the principle of particle detectors in a wide scope of fields from low to high energy including space physics and the medical environment It provides abundant information about the processes of electromagnetic and hadronic energy deposition in matter detecting systems and performance and optimization of detectors In this second edition new sections dedicated to the following topics are included space and high energy physics radiation environment non ionizing energy loss NIEL displacement damage in silicon devices and detectors single event effects detection of slow and fast neutrons with silicon detectors solar cells pixel detectors and additional material for dark matter detectors This book will benefit graduate students and final year undergraduates as a reference and supplement for courses in particle astroparticle and space physics and instrumentation A part of it is directed toward courses in medical physics The book can also be used by researchers in experimental particle physics at low medium and high energy who are dealing with instrumentation **ERDA Energy Research Abstracts** United States.
