

Welfare economic

The generic term for the normative aspect of economics. The basic assumption underlying welfare economics are value judgments that any economists are free to accept or reject. There is no scope for testing the truth of such assumption, as compared to positive economics where in principle they can be subjected to empirical testing.

Welfare economics is concerned with policy recommendations. It explores the ways of arriving at conditions such as social state A is to be preferred to social state B. The dominant school is the [paretian](#) one, sometimes described as the [New Welfare Economics](#). The most important departure of Paretian welfare economics from the [Pigovian](#) tradition was the rejection of the idea that utility was cardinally and interpersonally measurable. In order to extend the applicability of the [Pareto rule](#), [hypothetical compensation test](#) have been introduced. However, this requires that the utility be cardinally and interpersonally measurable.
