## **Communicating Science To The Public:**

**Communicating Science to the Public** David Evered, Maeve O'Connor, 1987-08-10 We live in a rapidly changing world in which science and technology influence the quality of our lives for better or worse An understanding of science is therefore important for all of us yet the general level of scientific literacy is low **Communicating Science to the Public** Leo Tan Wee Hin, R. Subramaniam, 2014-07-24 This book explores effective approaches for communicating science to the public in developing countries Offering multiple perspectives on this important topic it features 17 chapters that represent the efforts of 23 authors from eight countries Australia Bangladesh India Ireland New Zealand USA Singapore and South Africa Inside readers will find a diversity of approaches to communicate science to the public The book also highlights some of the challenges that science communicators science policy makers science teachers university academics in the sciences and even entrepreneurs may face in their attempts to boost science literacy levels in their countries In addition it shares several best practices from the developed world that may help readers create communication initiatives that can lead to increased engagement with science in communities in the Asia Pacific region and beyond Given the pervasive influence of science and technology in today's society their impact will only increase in the years to come as the world becomes more globalized and the economies of countries become more inter linked This book will be a useful source of reference for developing countries looking to tap into the potential of science for nation building and effectively engage their communities to better understand science and technology Supported by the Pacific Science Association Hawaii **The New Art of Old Public Science Communication** Miira B. Hill, 2022 This book investigates the phenomenon of science communication events as spectacles for legitimizing and communicating science to the public With attention to events such as Science Slam where scientists are asked to present their knowledge in new ways and speak to an audience of laymen the author examines the participants use of stylistic devices borrowed from other events in order to address a diverse audience in a competitive environment With attention to the performative appearance of scientists on stage and the manner in which contemporary public performing scientists present problematise and communicate knowledge the author considers the justifications offered by participants in terms of legitimacy and expectations Illustrating the crucial role of bodies techniques visuals and objects in the communicative construction of scientific reality **The New Art of Old Public Science Communication** The Science Slam sheds new light on the construction of improved science communication As such it will appeal to social scientists with interests in science communication the sociology of science and technology and the sociology of knowledge **The Chicago Guide to Communicating Science** Scott L. Montgomery, 2017-02-21 Enhanced with approximately 100 additional pages this second edition is a testament to the success of the first one Choice For more than a decade The Chicago Guide to Communicating Science has been the go to reference for anyone who needs to write or speak about their research Whether it's a student writing a thesis a faculty member composing a grant proposal or a public information officer crafting a press

release Scott Montgomery's advice is perfectly adaptable to any scientific writer's needs. This new edition has been thoroughly revised to address crucial issues in the changing landscape of scientific communication with an increased focus on those writers working in corporate settings, government and nonprofit organizations as well as academia. Half a dozen new chapters tackle the evolving needs and paths of scientific writers. These sections address plagiarism and fraud, writing graduate theses, translating scientific material, communicating science to the public and the increasing globalization of research. Through solid examples and concrete advice, Montgomery helps scientists develop their own voice and become stronger communicators. He also addresses the roles of media and the public in scientific attitudes and offers advice for those whose research concerns controversial issues such as climate change or emerging viruses. Today, communicators must move seamlessly among platforms and styles. The Chicago Guide to Communicating Science helps scientists and researchers expertly connect with their audiences no matter the medium.

Communicating Science in Social Contexts Donghong Cheng, Michel Claessens, Nicholas R. J. Gascoigne, Jenni Metcalfe, Bernard Schiele, Shunke Shi, 2008-07-15

Science communication as a multidisciplinary field has developed remarkably in recent years. It is now a distinct and exceedingly dynamic science that melds theoretical approaches with practical experience. Formerly well-established theoretical models now seem out of step with the social reality of the sciences and the previously clear-cut delineations and interacting domains between cultural fields have blurred. *Communicating Science in Social Contexts* examines that shift, which itself depicts a profound recomposition of knowledge, fields, activities and dissemination practices and the value accorded to science and technology. *Communicating Science in Social Contexts* is the product of long-term effort that would not have been possible without the research and expertise of the Public Communication of Science and Technology PCST Network and the editors. For nearly 20 years, this informal international network has been organizing events and forums for discussion of the public communication of science.

**Communicating Science** Toss Gascoigne, Bernard Schiele, Joan Leach, Michelle Riedlinger, Luisa Massarani, Bruce V. Lewenstein, Peter Broks, 2020-09-14

Modern science communication has emerged in the twentieth century as a field of study, a body of practice and a profession and it is a practice with deep historical roots. We have seen the birth of interactive science centres, the first university actions in teaching and conducting research and a sharp growth in employment of science communicators. This collection charts the emergence of modern science communication across the world. This is the first volume to map investment around the globe in science centres, university courses and research publications and conferences as well as tell the national stories of science communication. How did it all begin? How has development varied from one country to another? What motivated governments, institutions and people to see science communication as an answer to questions of the social place of science? *Communicating Science* describes the pathways followed by 39 different countries. All continents and many cultures are represented. For some countries, this is the first time that their science communication story has been told.
