**Change Management** Thomas Lauer, 2020-10-22 This book provides a compact overview of the topic of change management. It contains a comprehensible introduction to the basics and techniques of organizational change and provides practical information on the most important success factors. The reading is suitable for practitioners as well as for courses at colleges and universities. Topics such as stakeholder analysis, the use of the Social Intranet for communication and idea generation or intrapreneurship programs and a whole range of new case studies complete this comprehensive work. This book is a translation of the original German 3rd edition *Change Management* by Thomas Lauer published by Springer Verlag GmbH Germany part of Springer Nature in 2019. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors. Science and Technology in Catalysis K Eguchi, M Machida, I Yamanaka, 2007-11-27 Unsteady state operations of catalytic reactors provide plentiful opportunities for research and commercial realization of efficient heterogeneous catalytic processes. Forced unsteady state conditions generate unique distributions of process parameters and catalyst states often unattainable with traditional steady state operation. The unsteady states can be created by periodic changes in input flow parameters such as changes in inlet temperature and composition, catalyst circulation through reaction and regeneration zones or periodic flow reversals through fixed catalyst bed. This can result in increased productivity, selectivity, capital savings and operating cost reduction, higher energy efficiency. Efficient environmental technologies for treatment of toxic emissions, acid rain and greenhouse gas emissions can also be developed using the unsteady state concept. The Proceedings communicate recent progress in these areas of research and promote future development. The aims are to establish relations between academia, industry, engineers and scientists from all over the world to stimulate new catalytic technologies as well as fundamental research and to create new concepts for the development of effective catalytic systems. It presents the most up to date research in catalysis, contains the most recent developments in catalytic research, includes research findings as well as their application to industry, a thorough source of information on the latest developments of industrial catalysis in Japan.
