## **Communication Protocol Modeling:**

Communication Protocol Modeling Carl A. Sunshine, 1981      Using Performance Petri Nets for Modeling and Analysis of Communication Protocol Implementations Gandolfo Iraggi, 1992 Abstract This thesis reports from an investigation of the adequacy of performance Petri nets PPNs for modeling communication protocols and evaluating their performance The report describes PPNs and their tools It shows how an abstract specification of an existing communication protocol the Trivial File Transfer Protocol TFTP can be modeled and how implementation details can be added while preserving correctness We use the tools to predict the performance of TFTP The performance parameters of the model are obtained from an existing UNIX implementation of TFTP The predicted performance is compared with measured performance of TFTP on a Sun workstation From the results we evaluate PPNs with respect to modeling limitations complexity expressivity and accuracy

**Communicating Systems with UML 2** David Garduno Barrera, Michel Diaz, 2013-02-07 This book gives a practical approach to modeling and analyzing communication protocols using UML 2 Network protocols are always presented with a point of view focusing on partial mechanisms and starting models This book aims at giving the basis needed for anybody to model and validate their own protocols It follows a practical approach and gives many examples for the description and analysis of well known basic network mechanisms for protocols The book firstly shows how to describe and validate the main protocol issues such as synchronization problems client server interactions layer organization and behavior etc in an easy and understandable way To do so the book considers and presents the main traditional network examples e g unidirectional flows full duplex communication error recovering alternating bit Finally it presents the outputs resulting from a few simulations of these UML models Other books usually only focus either on teaching UML or on analyzing network protocols however this book will allow readers to model network protocols using a new perspective and integrating these two views so facilitating their comprehension and development Any university student studying in the field of computing science or those working in telecommunications embedded systems or networking will find this book a very useful addition

Generating Simulation Models of Communication Protocols Md. Tanzilur Rahman, Saini Gurpreet Singh, 2014-02 There have been many developments in the field of facilitated model based verification and validation techniques Most of them have been based upon observing the external behaviour of the system Our approach follows the same and is valid with the source code of the system under observance is not available Inference mechanism allow us to infer such machine models by observing We present a framework which adopts to generate component with infinite finite states and adapt to formal verifications The models used are communication protocol inferred by regular inference observed through the behaviour of communication protocol entity Also an approach is presented such that the observed behaviour of the protocol validates to the designed model of the protocol

Systä,2005-06-16 Visual notations and languages continue to play a pivotal role in the design of complex software systems In many cases visual notations are used to scribe usage or interaction scenarios of software systems or their components While representing scenarios using a visual notation is not the only possibility a vast majority of scenario description languages is visual Scenarios are used in telecommunications as Message Sequence Charts in object oriented system design as Sequence Diagrams in reverse engineering as execution traces and in requirements engineering as for example Use Case Maps or Life

Sequence Charts These techniques are used to capture requirements to capture use cases in system documentation to specify test cases or to visualize runs of existing systems They are often employed to represent concurrent systems that interact via message passing or method invocation In telecommunications for more than 15 years the International Telecommunication Union has standardized the Message Sequence Charts MSCs notation in its recommendation Z 120 More recently with the emergence of UML as a predominant software design methodology there has been special interest in the development of the sequence diagram notation As a result the most recent version 2.0 of UML encompasses the Message Sequence Chart notation including its hierarchical modeling features Other scenario focused diagrams in UML 2.0 include activity diagrams and timing diagrams

*SPIN Model Checking and Software Verification* Klaus Havelund, John Penix, Willem Visser, 2006-12-31 The SPIN workshop is a forum for researchers interested in the subject of automata based explicit state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems The SPIN model checker <http://netlib.bell-labs.com/netlib/spin/whatispin.html> developed by Gerard Holzmann is one of

the best known systems of this kind and has attracted a large user community This can likely be attributed to its efficient state exploration algorithms The fact that SPIN's modeling language Promela resembles a programming language has probably also contributed to its success Traditionally the SPIN workshops present papers on extensions and uses of SPIN As an experiment this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings

**The Modeling, Analysis and Synthesis of Communication Protocols** Siyi Terry Dong, 1983 *Formal Methods for Communication Protocol Specification and Verification* Carl A. Sunshine, Rand Corporation, 1979 Increasingly numerous and complex communication protocols are being employed in distributed systems and computer networks of all types This Note describes some of the more formal techniques that are being developed to facilitate design of correct protocols Our major conclusion is that it is vital to specify the services provided by a protocol layer in addition to specifying the cooperating protocol entities which make up the layer We develop service specifications of several representative protocols by using formal techniques from software engineering such as abstract machines and buffer histories A survey of protocol verification methods and a bibliography indexed by key phrases are also provided Author

**Verification of Communication Protocols in Web Services** Kazi Sakib, Zahir Tari, Peter Bertok, 2013-10-02 In the near future wireless sensor networks will become an integral part of our day to day life To solve different sensor networking related issues researchers have been putting various efforts and coming up with innovative ideas Within the last few years we have seen a steep growth of research works particularly on various sensor node organization issues The objective of this book is to gather recent advancements in the fields of self organizing wireless sensor networks as well as to provide the readers with the essential information about sensor networking
