Commutant Lifting Approach To Interpolation Problems:

The Commutant Lifting Approach to Interpolation Problems Foias, Frazho, 2013-11-11 Classical H interpolation theory was conceived at the beginning of the century by C Caratheodory L Fejer and I Schur The basic method due to Schur in solving these problems consists in applying the Mobius transform to peel off the data In 1967 D Sarason encompassed these classical interpolation problems in a representation theorem of operators commuting with special contractions Shortly after that in 1968 B Sz Nagy and C Foias obtained a purely geometrical extension of Sarason's results Actually their result states that operators intertwining restrictions of co isometries can be extended by preserving their norm to operators intertwining these co isometries starring with R G Douglas P S Muhly and C Pearcy this is referred to as the commutant lifting theorem In 1957 Z Nehari considered an L interpolation problem which in turn encompassed the same classical interpolation problems as well as the computation of the distance of a function f in L to H At about the same time as Sarason's work V M

Holomorphic Spaces Sheldon Jay Axler, John E. McCarthy, Donald Sarason, 1998-05-28 Expository articles describing the role Hardy spaces Bergman spaces Dirichlet spaces and Hankel and Toeplitz operators play in modern analysis **Featured Reviews in Mathematical Reviews 1997-1999** Donald G. Babbitt, Jane E. Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR **Systems, Approximation, Singular Integral Operators, and Related Topics** Alexander A. Borichev, Nikolai K. Nikolski, 2012-12-06 This book is devoted to some topical problems and applications of operator theory and its interplay with modern complex analysis It consists of 20 selected survey papers that represent updated mainly plenary addresses to the IWOTA 2000 conference held at Bordeaux from June 13 to 16 2000 The main subjects of the volume include spectral analysis of periodic differential operators and delay equations stabilizing controllers Fourier multipliers multivariable operator theory model theory commutant lifting theorems coisometric realizations Hankel operators and forms operator algebras the Bellman function approach in singular integrals and harmonic analysis singular integral operators and integral representations approximation in holomorphic spaces These subjects are unified by the common operator theoretic approach and the systematic use of modern function theory techniques Operator Algebras, Operator Theory and Applications J. J.

Grobler, L.E. Labuschagne, Manfred Möller, 2009-12-24 This volume contains the proceedings of the eighteenth International Workshop on Operator Theory and Applications IWOTA hosted by the Unit for Business Mathematics and Informatics of North West University Potchefstroom South Africa from July 3 to 6 2007 The conference as well as these proceedings was dedicated to Professors Joseph A Ball and Marinus M Kaashoek on the occasion of their 60th and 70th birthdays respectively This conference had a particular focus on Von Neumann algebras at the interface of operator theory with functional analysis and on applications of operator theory to differential equations Recent Advances in Operator Theory A. Dijksma, Marinus A. Kaashoek, A.C.M. Ran, 2012-12-06 This volume contains a selection of papers in modern operator theory and its applications Most of them are directly related to lectures presented at the International Workshop on Operator Theory and its Applications held at the University of Groningen IWOTA 98 in Groningen the Netherlands from June 30 July 3 1998 The workshop was attended by 97 mathematicians of which 12 were PhD or postdoctoral students from 19 countries The program consisted of 19 plenary lectures of 40 minutes and 72 lectures of 30 minutes in 4 parallel sessions The present volume reflects the wide range and rich variety of topics presented and discussed at the workshop The papers deal with operator polynomials and analytic operator functions with spectral problems of partial differential operators and related operator matrices with interpolation completion and extension problems with commutant lifting and dilation with Riccati equations and realization problems with scattering theory with problems from harmonic analysis and with topics in the theory of reproducing kernel spaces and of spaces with an indefinite metric All papers underwent the usual refereeing process **A Structured Interpolation Approach to Robust Systems Synthesis** Juan Carlos Cockburn, 1994 *Schur's Algorithm and Several Applications* Mihály Bakonyi, Tiberiu Constantinescu, 1992 *Metric Constrained Interpolation, Commutant Lifting and Systems* C. Foias, A.E. Frazho, I. Gohberg, M.A. Kaashoek, 2012-10-17 This book presents a unified approach for solving both stationary and nonstationary interpolation problems in finite or infinite dimensions based on the commutant lifting theorem from operator theory and the state space method from mathematical system theory Initially the authors planned a number of papers treating nonstationary interpolation problems of Nevanlinna Pick and Nehari type by reducing these nonstationary problems to stationary ones for operator valued functions with operator arguments and using classical commutant lifting techniques This reduction method required us to review and further develop the classical results for the stationary problems in this more general framework Here the system theory turned out to be very useful for setting up the problems and for providing natural state space formulas for describing the solutions In this way our work involved us in a much wider program than originally planned The final results of our efforts are presented here The financial support in 1994 from the NWO stimulansprogramma for the Thomas Stieltjes Institute for Mathematics in the Netherlands enabled us to start the research which led to the present book We also gratefully acknowledge the support from our home institutions Indiana University at Bloomington Purdue University at West Lafayette Tel Aviv University and the Vrije Universiteit at Amsterdam

We warmly thank Dr A L Sakhnovich for his carefully reading of a large part of the manuscript Finally Sharon Wise prepared very efficiently and with great care the troff file of this manuscript we are grateful for her excellent typing
