Compact Blue Green Lasers:

Compact Blue-Green Lasers W. P. Risk, T. R. Gosnell, A. V. Nurmikko, 2003-01-09 William Risk Timothy Gosnell and Arto Nurmikko have brought together their diverse expertise from industry and academia to write the first fully comprehensive book on the generation and application of blue green lasers This volume describes the theory and practical implementation of three techniques for the generation of blue green light nonlinear frequency conversion of infrared lasers upconversion lasers and wide bandgap semiconductor diode lasers In addition it looks at the various applications that have driven the development of compact sources of blue green light and reflects on the recent application of these lasers in high density data storage color displays reprographics and biomedical technology Compact Blue Green Lasers is suitable for graduate level courses or as a reference for academics and professionals in optics applied physics and electrical engineering **Compact**

Wide-band-gap Semiconductors C.G. Van de Walle, 2012-12-02 Wide band gap semiconductors have been a research topic for many decades However it is only in recent years that the promise for technological applications came to be realized simultaneously an upsurge of experimental and theoretical activity in the field has been witnessed Semiconductors with wide band gaps exhibit unique electronic and optical properties Their low intrinsic carrier concentrations and high breakdown

voltage allow high temperature and high power applications diamond SiC etc The short wavelength of band to band transitions allows emission in the green blue or even UV region of the spectrum ZnSe GaN etc In addition many of these materials have favorable mechanical and thermal characteristics These proceedings reflect the exciting progress made in this field Successful p type doping of ZnSe has recently led to the fabrication of blue green injection lasers in ZnSe applications of short wavelength light emitting devices range from color displays to optical storage In SiC advances in growth techniques for bulk as well as epitaxial material have made the commercial production of high temperature and high frequency devices possible For GaN refinement of growth procedures and new ways of obtaining doped material have resulted in blue light emitting diodes and opened the road to the development of laser diodes Finally while the quality of artificial diamond is not yet high enough for electronic applications the promise it holds in terms of unique material properties is encouraging intense activity in the field This volume contains contributions from recognized experts presently working on different material systems in the field The papers cover the theoretical experimental and application oriented aspects of this exciting topic

Trends in Optics Anna Consortini, 1996-08-05 Anna Consortini The President of the International Commission for Optics ICO has accommodated a broad spectrum of optical science topics in *Trends in Optics* This book a compilation of research reviews written by outstanding figures in the field of optics is aimed not only at specialists in the optical sciences but also at scientists in other fields who might want to broaden their knowledge of optics The latest developments in this rapidly progressing field are described and new applications are detailed including some previously undisclosed material on the U S Star Wars project Authoritative and approachable this volume should provide comprehensive insight into the ever expanding optical sciences Key Features Edited by the president of the International Commission for Optics Includes research reviews written by experts in the field Compiles a wide range of topics in optical science *II-VI Semiconductor Blue/Green Light Emitters*, 1997-02-18 This volume provides one of the first comprehensive reviews combining recent breakthroughs in blue green semiconductor lasers based on II VI materials and fundamentally important issues about the development and extension of these lasers to commercial applications These lasers are on the cutting edge of technology and could revolutionize areas such as optical information storage and color displays in the next few years An important focus of this book is on the recent laboratory development of an entirely new class of diode lasers based on a different family of semiconductor materials which emit at much shorter wavelengths in the green and blue portion of the spectrum These new and exciting developments in optoelectronics which are still undergoing laboratory testing have the potential of providing a major increase in storage capacity over current CD technology Besides applications in high density digital optical storage other possible applications for the compact blue green lasers will be in areas ranging from flat panel displays to multicolor printing to medical diagnostics Details practical issues of the growth of laser structures by molecular beam epitaxy by pioneers in the industry Explains how the barriers of doping and electrical contact were overcome by using wide bandgap II
