Academic researchers want their research to be understood and used by non technical audiences but that requires communication that is more accessible in the form of non technical and shorter summaries The researcher must both signal the quality of the research and ensure that the content is salient by making it more readable AI tools can improve salience however they can also lead to ambiguity in the signal since true effort is then difficult to observe We implement an online factorial experiment providing non technical audiences with a blog on an academic paper and vary the actual author of the blog from the same paper human or ChatGPT and whether respondents are told the blog is written by a human or AI tool Even though AI generated blogs are objectively of higher quality they are rated lower but not if the author is disclosed as AI indicating that signaling is important and can be distorted by AI Use of the blog does not vary by experimental arm The findings suggest that provided disclosure statements are included researchers can potentially use AI to reduce effort costs without compromising signaling or salience Academic researchers want their research to be understood and used by non technical audiences but that requires communication that is more accessible in the form of non technical and shorter summaries The researcher must both signal the quality of the research and ensure that the content is salient by making it more readable AI tools can improve salience however they can also lead to ambiguity in the signal since true effort is then difficult to observe We implement an online factorial experiment providing non technical audiences with a blog on an academic paper and vary the actual author of the blog from the same paper human or ChatGPT and whether respondents are told the blog is written by a human or AI tool Even though AI generated blogs are objectively of higher quality they are rated lower but not if the author is disclosed as AI indicating that signaling is important and can be distorted by AI Use of the blog does not vary by experimental arm The findings suggest that provided disclosure statements are included researchers can potentially use AI to reduce effort costs without compromising signaling or salience [Writing AI Prompts For Dummies](#)

Why Machines Will Never Rule the World Jobst Landgrebe,Barry Smith,2025-04-30 This is a revised and expanded second edition of Why Machines Will Never Rule the World Its core argument remains the same that an artificial intelligence AI that could equal or exceed human intelligence sometimes called artificial general intelligence AGI is for mathematical reasons impossible It offers two specific reasons for this claim Human intelligence is a capability of the human brain and central nervous system which is a complex dynamic system Systems of this sort cannot be modelled mathematically in a way that allows them to operate inside a computer In supporting their claim the authors Jobst Landgrebe and Barry Smith marshal evidence from mathematics physics computer science philosophy linguistics biology and anthropology setting up their book around three central questions What are the essential marks of human intelligence What is it that researchers try to do when they attempt to achieve Artificial Intelligence AI And why after more than 50 years are our interactions with AI for example when on the telephone with our bank s computers still so unsatisfactory The first edition was published the same week that ChatGPT was unleashed onto the world This second edition shows how the arguments in the book apply already to Large Language Models such as ChatGPT This new edition also brings up to date the arguments relating to the limits of AI showing why AI systems are best viewed as pieces of mathematics which cannot think feel or will They also demolish the idea that with the help of AI we could solve physics in a way that would allow us to create in the cloud a perfect simulation of reality in which we could enjoy digital immortality Such ideas reveal a lack of understanding of physics mathematics human biology and computers There is still as the authors demonstrate in an updated final chapter a great deal that AI can achieve which will benefit humanity But these benefits will be achieved without the aid of systems that are more powerful than humans which are as impossible as AI systems that are intrinsically evil or able to will a takeover of human society Key Changes to the Second Edition Shows how the arguments of the first edition apply also to new Large Language Models Adds a treatment of human practical intelligence of knowing how vs knowing that a topic that is ignored by the AI community Demonstrates why AI ethics should be relabelled as ethics of human uses of AI Adds a new chapter showing the essential limitations of physics providing a thorough grounding for the arguments of the book Demolishes the idea that we might already be living in a simulation
