Optimal Physical Activity across the Lifespan for People of All Abilities Ronald F. Zernicke, David Arthur Hart, Humans evolved to be mobile within the boundary conditions of Earth and many biological and physiologic systems depend on mechanical loading to maintain integrity during growth and maturation during skeletal maturity and during the aging process These systems subscribe to the use it or lose it principle and thus require continual use to maintain integrity Given that premise

considerable basic and clinical research efforts have been directed at optimizing the effectiveness and positive impact of exercise on sports performance and the well being of those with intact systems However those with disabilities or compromised abilities also benefit from exercise protocols and there exists a need to focus attention on these populations as well Given the myriad of biological and physiological systems that benefit from exercise and mechanical loading there is a need for all humans of varying abilities to not only maintain the integrity of their health but to attempt to optimize it recognizing that optimizing each person s health across the stages of the life cycle may require different exercise protocols dependent on stage of life sex genetics and other individualized variables For those with physical disabilities embracing and maintaining such exercise protocols may be challenging but expanded research translation of findings and integration of the outcomes into everyday life to enhance the health and well being of this significant population are needed going forward

Think Like a Human David Weitzner, 2025-05-13. A new way of thinking that improves how we work, create and live, empowering readers to outsmart AI, a tool that can never do what humans do. The bedrock on which technology has been built and on which we now make strategic, political, ethical and even day to day decisions: algorithmic thinking is flawed. As we race headlong into a future where we outsource all our problem solving to artificial intelligence, the greatest threat is not superintelligent machinery but too much trust in Big Tech and not enough trust in the power of our own minds. *Think Like a Human* offers a new way forward: what Dr. Weitzner calls *artful intelligence*, a philosophy that can help each of us solve problems and make better decisions. To think artfully is to approach problem solving not just with our brains but with our hands, eyes and ears along with our literal and metaphorical hearts and guts, tapping into the myriad of underutilized cognitive resources distributed throughout our bodies. *Think Like a Human* is a refreshing antidote and reality check to artificial intelligence mania and fear. Cutting through the hype, misinformation and corporate hustle around AI, this book will inspire you to adopt the artful approach, bringing intuition and emotional intelligence to your work and life.
