**Narrow Gap Semiconductors 2007** Ben Murdin, S.K. Clowes, 2008-11-30 Narrow gap semiconductors have provided an exciting field of research and show a number of extreme physical and material characteristics They are the established material systems for infrared detectors and

emitters and with new developments in the technology these materials are emerging as a viable route to high speed low power electronics New kinds of narrow gap semiconductor such as graphene and other composite nanocrystals are also providing renewed interest in the underlying physics The Thirteenth International Conference on Narrow Gap Semiconductors NGS 13 was held at the University of Surrey Guildford UK in July 2007 The conference brought together experts and young scientists to discuss the latest findings and developments in the field This book contains the invited and contributed papers which were presented at this meeting and serves to provide a broad overview of the current worldwide activities in narrow gap semiconductor research The subjects covered are theoretical and material physics of narrow gap semiconductors and quantum heterostructures spin related phenomenon including carrier dynamics and magnetotransport carbon nanotubes and graphene as novel narrow gap material as well as device physics including transistors mid and far infrared lasers and detectors

**Microscopy of Semiconducting Materials 2007** A.G. Cullis,P.A. Midgley,2008-12-02

This volume contains invited and contributed papers presented at the conference on Microscopy of Semiconducting Materials held at the University of Cambridge on 2 5 April 2007 The event was organised under the auspices of the Electron Microscopy and Analysis Group of the Institute of Physics the Royal Microscopical Society and the Materials Research Society This international conference was the fifteenth in the series that focuses on the most recent world wide advances in semiconductor studies carried out by all forms of microscopy and it attracted delegates from more than 20 countries With the relentless evolution of advanced electronic devices into ever smaller nanoscale structures the problem relating to the means by which device features can be visualised on this scale becomes more acute This applies not only to the imaging of the general form of layers that may be present but also to the determination of composition and doping variations that are employed In view of this scenario the vital importance of transmission and scanning electron microscopy together with X ray and scanning probe approaches can immediately be seen The conference featured developments in high resolution microscopy and nanoanalysis including the exploitation of recently introduced aberration corrected electron microscopes All associated imaging and analytical techniques were demonstrated in studies including those of self organised and quantum domain structures Many analytical techniques based upon scanning probe microscopies were also much in evidence together with more general applications of X ray diffraction methods

These proceedings are a continuation of the series of International Conferences in Germany entitled Mechanics of Unsaturated Soils The objective is to discuss and understand unsaturated soil behaviour so that engineered activities are

improved in terms of judgement and quality In addition to knowledge of classical concepts it is a challenge to adapt convincing new concepts and present them in such a way that they can be used in engineering practices

**Progress in Turbulence II** Martin Oberlack, George Khujadze, Silke Guenther, Tanja Weller, Michael Frewer, Joachim Peinke, Stephan Barth, 2007-06-03 Besides turbulence there is hardly any other scientific topic which has been considered as a prominent scientific challenge for such a long time The special interest in turbulence is not only based on it being a difficult scientific problem but also on its meaning in the technical world and our daily life This carefully edited book comprises recent basic research as well as research related to the applications of turbulence Therefore both leading engineers and physicists working in the field of turbulence were invited to the iTi Conference on Turbulence held in Bad Zwischenahn Germany 25th 28th of September 2005 Discussed topics include for example scaling laws and intermittency thermal convection boundary layers at large Reynolds numbers isotropic turbulence stochastic processes passive and active scalars coherent structures numerical simulations and related subjects
