Getting to the Heart of Science Communication Faith Kearns, 2021-05-11 At a community fire day in a northern California town several years ago author Faith Kearns gave a talk on building fire safe houses able to withstand increasingly common wildfires Much to her surprise Kearns was confronted by an audience member whose house had recently burned What she thought was straightforward helpful scientific information had instead retraumatized audience members forcing Kearns to reevaluate her approach Like Kearns scientists today working on controversial issues from climate change to drought to COVID 19 are finding themselves more often in the middle of deeply traumatizing or polarized conflicts It is no longer enough for scientists to communicate a scientific topic clearly They must not only be experts in their fields of study but also experts in navigating the thoughts feelings and opinions of members of the public they engage with and with each other And the conversations are growing more fraught In Getting to the Heart of Science Communication Faith Kearns has penned a succinct guide for navigating the human relationships critical to the success of practice based science Using interviews and personal anecdotes as well as her own insights as a field scientist Kearns walks readers through the evolution

of science communication and how emotional and high stakes issues have shaped communication The meat of the book lies in the middle chapters where Kearns offers key tools for communicators listening working with conflict and understanding trauma loss and healing She concludes the book with a substantive discussion on diversity equity and inclusion in science communication and advice to readers for handling their own emotional needs in an unpredictable career landscape This meticulously researched volume takes science communication to the next level helping scientists see the value of listening as well as talking understanding power dynamics in relationships and addressing the roles of trauma loss grief and healing This book will particularly resonate with early to mid career scientists graduate students and researchers especially those in applied sciences who work closely with the public
