## **Communities In Cyberspace:**

Communities in Cyberspace Marc A. Smith, Peter Kollock, 1999 This text looks at the virtual community of cyberspace and analyzes its relationship to the real one as lived out in today's societies. It shows how the idea of community is being challenged by the increasing power and range of cyberspace. *Communities in Cyberspace*, Printbegrnsninger Der kan printes kapitelvis Building Virtual Communities K. Ann Renninger, Wesley Shumar, 2002-07-08 Building Virtual Communities examines how learning and cognitive change are fostered by online communities. The chapters provide a basis for thinking about the dynamics of Internet community building. This includes consideration of the role of the self or individual as a participant in virtual community and the design and refinement of technology as the conduit for extending and enhancing the possibilities of community building in cyberspace. Building Virtual Communities will interest educators, psychologists, sociologists, and researchers in human computer interaction. Engaging Cyber Communities Yashua W. Gustafson, 2010 There are 1.7 billion Internet users worldwide as of October 2009 and growing. The dramatic growth in online users in conjunction with the influence of social communities in cyberspace is having an effect in current and future international affairs. Despite the growing amount of activity performed by social groups in cyberspace, the US military remains focused on technology-centric operations such as computer network attack and computer network defense. This leads to the question of whether the US military is missing an opportunity by not focusing on online social communities. This research performed a problem and solutions methodology to investigate this question. The research came up with the criteria of value and risk to analyze whether the US military should engage cyber communities. The results of this study suggest engaging online communities can augment the technology-centric solutions. Engaging online communities can help to degrade, deceive, and exploit adversaries' operations in cyberspace. Engaging online communities can also influence and help respond to social groups' issues and concerns. Without responding or influencing these groups, they are left to their own vagaries as well as negative and adversarial influence. There are risks associated with engaging online communities due to the ubiquitous reach of cyberspace. An ill-conceived comment, text, or video can be sent globally and have a negative impact on objectives and reputation. However, this study finds applying controls and rules of engagement in undertaking these operations can mitigate the risks. Thus, the US military needs to develop these capabilities and engage social communities in cyberspace. Abstract **Economic Policy Issues of the New Economy** Horst Siebert, 2002-08-23 This volume addresses trends, causes, and consequences of the new economy in micro and macroeconomic terms. Modern information and communications technologies increase the efficiency of traditional activities and pave the way for creating new activities and products. How will market participants cope with the challenges of the new economy and which role will governments play in a dramatically changing world? The book presents a thorough analysis of the effects of new technologies and products on overall productivity and on goods markets, labor markets, and financial markets. It also deals with the implications of the new

economy for the welfare state and discusses the issue of whether there is a need for new regulatory devices in particular in the field of international trade in goods and services
