# Colonisation Of Australia By The Rabbit Oryctolagus Cuniculus L Project Report

**David Lindenmayer, Mark A. Burgman**

## **Colonisation Of Australia By The Rabbit *Oryctolagus Cuniculus* L Project Report:**

**Colonisation of Australia by the Rabbit, *Oryctolagus Cuniculus* (L.)** Eleanor Stodart, Elizabeth Mary Stodart, Ian Parer, 1988-01-01      **The Action Plan for Australian Birds 2020** Stephen T. Garnett, G Barry Baker, 2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019/20. Many of the newly listed birds are subspecies confined to Kangaroo Island, where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.

**Biological Diversity** Paul E. Hatcher, Nick Battey, 2011-03-23 Biological Diversity takes a fresh, innovative approach to the teaching of biodiversity. Rather than detailing and cataloguing the major taxa and their evolutionary relationships, the authors have selected 18 groups of organisms and used these as a framework in which to discuss the species and their interactions with man and each other. There is a strong narrative theme throughout: the exploited and the exploiters, and in many cases there is emphasis on the historical context. A wide range of organisms are covered, from the unicellular to birds and mammals, and with an equal consideration of plants and animals. Species have been chosen for their ability to best illustrate particular biological principles and for their strong interaction with other species. After an introduction, the book is divided into two parts: Exploited and Exploiters. Each of the chapters, although linked to each other, forms a stand-alone essay. They are scientifically rigorous, up to date, and do not shy away from addressing some controversial issues. Chapters have text boxes highlighting important issues and concepts, lists of further reading, and references. In addition to tables and figures, the book has a selection of original illustrations drawn by leading artist Steven Appleby. This fresh approach will appeal to all those interested in the biological sciences and aims to be accessible to people with a diversity of backgrounds. It will prove particularly useful to biology students, enabling them to get to grips with important biological principles and concepts that underpin the diversity of life and the interrelationship of humans with other groups of organisms.

**Invasion Biology and Ecological Theory** Herbert H. T. Prins, Iain J. Gordon, 2014-01-23 Many conservationists argue that invasive species form one of the most important threats to ecosystems the world over, often spreading quickly through their new environments and

jeopardising the conservation of native species As such it is important that reliable predictions can be made regarding the effects of new species on particular habitats This book provides a critical appraisal of ecosystem theory using case studies of biological invasions in Australasia Each chapter is built around a set of eleven central hypotheses from community ecology which were mainly developed in North American or European contexts The authors examine the hypotheses in the light of evidence from their particular species testing their power in explaining the success or failure of invasion and accepting or rejecting each hypothesis as appropriate The conclusions have far reaching consequences for the utility of community ecology suggesting a rejection of its predictive powers and a positive reappraisal of natural history **Practical**

**Conservation Biology** David Lindenmayer, Mark A. Burgman, 2005 Provides the essential framework for under graduate and post graduate courses in conservation biology and natural resource management by covering the complete array of topics central to these fields Lindenmayer from ANU ACT and Burgman from University of Melbourne Vic **The Archaeology of**

**Australia's Deserts** Mike Smith, 2013-02-25 This is the first book length study of the archaeology of Australia's deserts exploring the cultural and environmental history of these drylands **New Challenges to Health** Society for General Microbiology. Symposium, G. L. Smith, Society for General Microbiology, 2001-04-19 Viruses continually evolve and adapt posing new threats to health This book discusses the ecology of viruses with particular emphasis on the emergence of devastating haemorrhagic disease and reviews the molecular and cell biological basis of the pathogenesis of several virus diseases An introduction is given to the mathematical analysis of recurrent epidemic virus disease such as measles Neurological and psychological disease is discussed in relation to the pathological mechanisms that may underlie prion disease such as new variant CJD and to the possible virus involvement in human psychiatric illness Virus infections that have come to prominence recently HIV bunyaviruses morbilliviruses and caliciviruses or that remain a threat influenza and hepatitis viruses are discussed There are also chapters on new and potential niches for virus infections in the immunocompromised and the problem of the emergence of antiviral drug resistance in viruses for which therapies exist

*Wildlife Research*, 2008 **Australia's Ever-changing Forests II** John Dargavel, Sue Feary, 1993 Eighteen papers dealing with Australia's forest history and environmental history many on a regional basis cultural as well as natural environments are discussed questions of assessing heritage values of forests **Proceedings - Vertebrate Pest**

**Conference**, 1996 **Biennial Report** CSIRO (Australia). Division of Wildlife and Ecology, 1988 **Biological Control of Vertebrate Pests** Frank Fenner, Bernardino Fantini, 1999 The book describes the natural history of myxoma virus in American rabbits and the history of its introduction into European rabbits at length The changes in rabbit and virus over the last 40 years provide the classical example of coevolution of a virus and its vertebrate host and a paradigmatic model for the understanding of an emerging infectious disease Rabbit haemorrhagic disease virus has been spreading in Australia for only three years but in some areas has been very effective Written by leading world experts in animal virology and the history of
