Color Atlas of Human Anatomy Robert Matthew Hay McMinn, John Pegington, Peter H. Abrahams, 1993
Ultrasonic Topographical and Pathotopographical Anatomy Z. M. Seagal, O. V. Surnina, 2016-08-10 Written by experienced and well respected physicians and professors this new all color volume presents the ultrasonic topographical and pathotopographical anatomy of the body including the head neck chest anterolateral abdominal wall abdominal organs retroperitoneal space male and female pelvises and lower extremities Specific and non specific ultrasonic symptoms are suggested for normal and abnormal developmental variants diffuse and local pathotopographical anatomy This color atlas contains comparative topographical and pathotopographical data and is the first manual of its kind for students and medical specialists in different areas including those specializing in medical sonography The original technology was tested at clinics in patients subjected to ultrasonic monitoring Because of early detection there were no false positive or false negative results The therapy was effective and in some cases the use of the original method of seagalography optometry and

pulsemotorgraphy has made it possible to develop new methods of treatment and or to determine the optimal doses of drugs as well as to develop effective drug complexes for treatment of a given pathology This important new volume will be valuable to physicians junior physicians medical residents lecturers in medicine and medical students alike either as a textbook or as a reference It is a must have for any physician s library

Novel Reliable Approaches for Prediction and Clinical Decision-making in Cancer Ines Zidi, Safa Bhar Layeb, Vera Rebmann, 2025-01-14 Cancer is one of the leading causes of death worldwide Significant advances in the understanding of cancer biology have been reported in the last decade Many important driving changes especially immunological deregulations are implicated in cancer development and progression These events lead to cancer complexity and heterogeneity in cancer and play a substantial role in pharmacokinetic variability in anticancer therapies Furthermore it remains difficult to quantify the prevalence of recurrence and metastasis Interestingly omics have shown promising results and are being used to better describe cancer susceptibility prognosis and response to treatment Additionally researchers are still searching for immunological and other cancer signatures particularly relevant for effective cancer prediction Emerging data obtained independently are still insufficient to explain the complexity of cancer

Hopefully new comprehensive systemic and combinatorial approaches will yield benefit in the future and will lead to the development of personalized treatment regimens and improved immunotherapies In this research topic we welcome submissions that propose new panels including and not limited to immunological information cytokines signal transduction pathways involving immune receptors immune tolerance molecules extracellular vesicles immune cells etc genetic information related to genes involved in the deregulation of immune functions eg multi SNP CNV medical history imaging results Authors should present integrative and systemic approaches using clinical data to make reliable predictions of cancer risk and its prognosis and to support cancer treatment management and clinical decision making Normal Cytology

Madelyn Lew,Judy Pang,Liron Pantanowitz,2023-01-01 In the practice of cytopathology cytologists frequently encounter a spectrum of benign normal cells in samples In fact these normal cells frequently comprise the greatest proportion of material present on a cytology slide This is frequently the case in Pap smears of the uterine cervix urine samples and lung samples such as bronchial brushings Normal cytology can often mimic pathology leading to misdiagnoses especially in cases with reactive and metaplastic changes Moreover cytopathology findings of certain neoplasms can also mimic normal cytology Today cytology laboratories are no longer confined to dealing with just exfoliative specimens and superficial aspirations With interventional radiology as well as endobronchial and endoscopic ultrasound guided fine needle aspirations FNA we increasingly encounter visceral samples Hence cytologists are even likely to encounter normal elements from deep seated organs Sometimes unexpected normal elements may be found within cytology specimens because a FNA procedure has contamination or inadvertently sampled a nearby organ or normal anatomical structure A typical example is the finding of ganglion cells when a FNA is performed targeting a celiac node for cancer staging Elgarby EA et al Frequency and characterization of celiac ganglia diagnosed on fine needle aspiration Cytojournal 2015 12 4 Despite the importance of knowing the spectrum of normal cytology there are limited reference materials available on this topic for cytologists Most cytopathology texts deal with abnormal cytology Often the chapters in these books only devote a few sentences about normal cytology euplasia Our proposed book intends to fulfil this need The book will contain a mixture of text and images atlas Important aspects related to cytology practice will be highlighted such as clinical relevance differential diagnoses mimics and pitfalls The images will include a variety of cytology specimen preparations e g direct smears liquid based samples touch preparations cell blocks and stains e g Diff Quik MGG Papanicolaou H E In selected cases the expected immunoprofile of normal cells will be addressed Each chapter will also include a modest list of helpful and contemporary references
