Color Change Mechanisms Of Cold Blooded:

Color Change Mechanisms of Cold-Blooded Vertebrates H. Waring, 2013-09-03 *Color Change Mechanisms of Cold Blooded Vertebrates* focuses on color change in vertebrates and its relation to endocrine control. The book first tackles physiological color changes in amphibians, elasmobranchs, teleosts, and cyclostomes. Topics include description of responses, nonvisual response, criticisms of the two hormone hypothesis as applied to amphibians and elasmobranchs, and summary of teleost color change mechanisms. The publication then elaborates on physiological color changes in reptiles and biological assay of melanin dispersing hormones, as well as generalities about reptilian color change, general statement on biological assay, and theoretical considerations. The manuscript ponders on the chemistry of melanin dispersing hormones, mechanism of the melanophore, and actions of melanin dispersing hormones on functions other than color change. Discussions focus on glandular origin of melanin dispersing hormones, energy sources for melanin movement and metabolism. The text is highly recommended for readers interested in color change in vertebrates. **Color change mechanisms of cold-blooded**

Waring, 1963 **Biology of the Integument** J. Bereiter-Hahn, A.G. Matoltsy, K.S. Richards, 2013-04-17 The integument plays an important role in the survival of meta zoans by separating and protecting them from a hostile environment. Its function ranges from protection against injury and infection, participation in the regulation of body temperature and water balance, to respiratory activity, monitoring of the environment, and production of signals related to behaviour. All these result from specific structural, biochemical, and physiological properties of intra and extracellular components of the integument. Thus its characterization can be best accomplished by a multidisciplinary approach with authors specialized in different fields of science. This multi-author book in two volumes provides an up to date survey of the literature. The first volume deals with the integument of invertebrates, the second with that of vertebrates, both organized primarily on a phylum basis. As the level of knowledge on the integument of phyla differs considerably, the information provided is correspondingly either limited or condensed. For some of the smaller groups of invertebrates, little information is available, as often only a few electron micrographs are to be found in the literature. On the other hand, from the large body of knowledge existing for vertebrates, particularly for mammals, no complete overview can be provided, but publications giving access to further information have been reviewed critically. **The Melanotropic Peptides** M.E. Hadley, 2018-01-18 The three volumes on The Melanotropic Peptides are the outcome of a conference of the same name that was held in Tucson, Arizona, from October 11-12, 1986. The format of the three volumes provides a complete coverage of what is known about the Melanotropic Peptides. Volume I provides information on the source, synthesis, chemistry, mechanism of secretion, control of secretion, and the circulation and metabolism of the melanotropic peptides.
