Combat Aircraft Prototypes Since 1945:

Combat Aircraft Prototypes Since 1945 Robert Jackson, 1986 **Early Jet Fighters, 1944-1954** Leo

Marriott, 2020-03-30 A clearly written profusely illustrated and well organized volume on Soviet and European jet fighter design Air Power History In his previous book on early jet fighters Leo Marriott traced the history of the revolutionary aircraft produced by the British and Americans immediately after the Second World War Now in this companion volume he describes jet fighter development on the continent of Europe and in the Soviet Union during the same remarkable period Using over 200 archive photographs he covers the pioneering German designs then the range of experimental and operational fighters constructed by the Soviets the French and the Swedes The sheer variety of the designs that manufacturers came up with during this short intense period of innovation make for fascinating reading Several of the most famous jet fighters feature prominently in the rare photographs and are analyzed in the expert text including the Messerschmitt Me 262 the Heinkel He 162 the MiGs 15 17 and 19 the Dassault Ouragan and the Saab J29 But perhaps the most rewarding aspect of the book is its record of experimental projects testing new concepts that rapidly became established elements of jet aircraft design The photographs of these largely forgotten aircraft give us an insight into the extraordinary technical challenges and the ambition and inventiveness of the designers and manufacturers who overcame them

Early Jet Bombers, 1944-1954 Leo Marriott, 2020-01-19 The author of *Early Jet Fighters 1944-1954* turns his attention to jet bombers in another stunning pictorial history Don't miss out on this one IPMS USA Using over 200 archive photographs Leo Marriott gives us a powerful portrait of the first decade in the development of the jet bomber This was a time of intense technical innovation that transformed the design and capabilities of the bomber and gave birth to a range of classic military aircraft in the USA Great Britain France and the Soviet Union The photographs take the story from the earliest jet bombers constructed in Germany toward the end of the Second World War to the successful designs both sides depended on through the first phase of the Cold War The pace of development was rapid and remarkable from initial prototypes built in Germany the Arado 234 and the Junkers Ju 287 to the fleets of advanced jet bombers like the British Canberra and V bombers the American B 47 and B 52 and the Soviet Il 28 Beagle and Tu 16 Badger The images of the prototypes give a fascinating insight into the extraordinary technical challenges and the ambition and inventiveness of the designers and manufacturers who overcame them Excellent coverage of a lesser known aspect of airpower development the wealth of photos makes it enjoyable and interesting Air Power History

The U.S. Combat Aircraft Industry, 1909-2000

Mark A. Lorell, 2003 Drawing on primary and secondary sources on the aircraft industry this report provides a brief survey of industry structure innovation and competition in the U S fixed wing combat aircraft industry from its earliest days to the present It supports a much larger research effort examining the future of the structure innovation and competition of the U S military aircraft industrial base that responds to congressional concerns about that future

Air Pictorial ,1995 **The Guinness Book of Air Warfare** Robert Jackson,1993 *The Aeronautical Journal* ,1985
Aerospace ,1994 **A Guide to the Sources of United States Military History** Robin Higham,Donald J.

Mrozek,1993 A reference book covering from Colonial Forces 1607 1773 up to the time of the recent Persian Gulf War The book links military history with developments in technology and science and in 20th century military and naval medicine First it gives unique coverage of the European background of American military affairs and then proceeds concentrating first on eras then on branches of the service in war and in peace **United States Air Force in Britain** Robert Jackson,2000

Armed Forces ,1986 **Whitaker's Cumulative Book List** ,1985 *Flypast* ,2006 Sound Barrier Peter Caygill,2006 As the speed of early aircraft gradually increased there eventually became awareness during the 1940 s that strange things were occurring at around 500mph Many later WW2 fighter aircraft were reported to become dangerously uncontrollable in high speed power dives Pilot s and aircraft designers were beginning to encounter the sound barrier We now realize it to be a phenomenon that occurs when the speed of sound is reached and air compressibility demands additional power to break through it Breaking the sound barrier became one of the biggest challenges to the world s aircraft designers and it took great courage and daring for the test pilots of that era to find the way through this difficult obstacle This is the story of how innovative design and pilots learned how to deal with supersonic flight It records the many different experimental aircraft and tells of the experiences of those that flew them Many pilots lost their lives during those dangerous flights but those who survived became legendary Combat Aircraft of the World Gordon Swanborough,1962 **U.S.**

Experimental & Prototype Aircraft Projects Bill Norton,2008 This book focuses on those American fighter projects of WWII that never reached combat forces or only in a very limited manner The book illuminates little known or minimally documented aircraft and projects that significantly advanced fighter design that never went into full rate production and deployment The standard types are also examined to illustrate the state of the art at the time the American posture and capabilities goals set by national and military leadership and general factors affecting the course of development for classes of fighters Hence this work follows the overall development of American fighter aircraft but emphasizes those little known projects that matured to the point of significant design development such as mockups wind tunnel models and especially those yielding flying prototypes Also includes dead end variants of service types those only exported after US evaluation and aircraft that entered service in only small numbers before being overcome by more advanced models or the end of hostilities

The Cutting Edge Mark A. Lorell,Hugh P. Levaux,1998 The proposition that innovation is critical in the cost effective design and development of successful military aircraft is still subject to some debate RAND research indicates that innovation is promoted by intense competition among three or more industry competitors Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry the authors here examine

the history of the major prime contractors in developing jet fighters since World War II They make use of an extensive RAND database that includes nearly all jet fighters fighter attack aircraft and bombers developed and flown by U S industry since 1945 as well as all related prototypes modifications upgrades etc The report concludes that 1 experience matters because of the tendency to specialize and thus to develop system specific expertise 2 yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders and 3 dedicated military R D conducted or directly funded by the U S government has been critical in the development of new higher performance fighters and bombers
