Combinatorial Network Theory:

Combinatorial Network Theory Ding-Zhu Du, F. Hsu, 2013-04-09 A basic problem for the interconnection of communications media is to design interconnection networks for specific needs For example to minimize delay and to maximize reliability networks are required that have minimum diameter and maximum connectivity under certain conditions The book provides a recent solution to this problem The subject of all five chapters is the interconnection problem The first two chapters deal with Cayley digraphs which are candidates for networks of maximum connectivity with given degree and number of nodes Chapter 3 addresses Brujin digraphs Kautz digraphs and their generalizations which are candidates for networks of minimum diameter and maximum connectivity with given degree and number of nodes Chapter 4 studies double loop networks and Chapter 5 considers broadcasting and the Gossiping problem All the chapters emphasize the combinatorial aspects of network theory Audience A vital reference for graduate students and researchers in applied mathematics and theoretical computer science Topics in Combinatorics and Graph Theory Rainer Bodendiek, Rudolf Henn, 2012-12-06 Graph Theory is a part of discrete mathematics characterized by the fact of an extremely rapid development during the last 10 years The number of graph theoretical paper as well as the number of graph theorists increase very strongly The main purpose of this book is to show the reader the variety of graph theoretical methods and the relation to combinatorics and to give him a survey on a lot of new results special methods and interesting informations This book which grew out of contributions given by about 130 authors in honour to the 70th birthday of Gerhard Ringel one of the pioneers in graph theory is meant to serve as a source of open problems reference and guide to the extensive literature and as stimulant to further research on graph theory and combinatorics **The Seventh European Conference on Combinatorics, Graph Theory and Applications** Jaroslav Nešetřil, Marco Pellegrini, 2014-01-18 In the tradition of EuroComb 01 Barcelona Eurocomb 03 Prague EuroComb 05 Berlin Eurocomb 07 Seville Eurocomb 09 Bordeaux and Eurocomb 11 Budapest this volume covers recent advances in combinatorics and graph theory including applications in other areas of mathematics computer science and engineering Topics include but are not limited to Algebraic combinatorics combinatorial geometry combinatorial number theory combinatorial optimization designs and configurations enumerative combinatorics extremal combinatorics ordered sets random methods topological combinatorics Graph Theory and Finite Combinatorics Sabra S.
