Combinatorial Algebraic Geometry Gregory G. Smith, Bernd Sturmfels, 2017-11-17 This volume consolidates selected articles from the 2016 Apprenticeship Program at the Fields Institute part of the larger program on Combinatorial Algebraic Geometry that ran from July through December of 2016 Written primarily by junior mathematicians the articles cover a range of topics in combinatorial algebraic geometry including curves surfaces Grassmannians convexity abelian varieties and moduli spaces This book bridges the gap

between graduate courses and cutting edge research by connecting historical sources computation explicit examples and new results

Approximation, Randomization, and Combinatorial Optimization. Algorithms and Techniques Sanjeev Arora, 2003-08-13 This book constitutes the joint refereed proceedings of the 6th International Workshop on Approximation Algorithms for Optimization Problems APPROX 2003 and of the 7th International Workshop on Randomization and Approximation Techniques in Computer Science RANDOM 2003 held in Princeton NY USA in August 2003 The 33 revised full papers presented were carefully reviewed and selected from 74 submissions Among the issues addressed are design and analysis of randomized and approximation algorithms online algorithms complexity theory combinatorial structures error correcting codes pseudorandomness derandomization network algorithms random walks Markov chains probabilistic proof systems computational learning randomness in cryptography and various applications

Geometric Algorithms and Combinatorial Optimization Martin Grötschel, Laszlo Lovasz, Alexander Schrijver, 2012-12-06 Historically there is a close connection between geometry and optimization This is illustrated by methods like the gradient method and the simplex method which are associated with clear geometric pictures In combinatorial optimization however many of the strongest and most frequently used algorithms are based on the discrete structure of the problems the greedy algorithm shortest path and alternating path methods branch and bound etc In the last several years geometric methods in particular polyhedral combinatorics have played a more and more profound role in combinatorial optimization as well Our book discusses two recent geometric algorithms that have turned out to have particularly interesting consequences in combinatorial optimization at least from a theoretical point of view These algorithms are able to utilize the rich body of results in polyhedral combinatorics The first of these algorithms is the ellipsoid method developed for nonlinear programming by N Z Shor D B Yudin and A S Nemirovskii It was a great surprise when L G Khachiyan showed that this method can be adapted to solve linear programs in polynomial time thus solving an important open theoretical problem While the ellipsoid method has not proved to be competitive with the simplex method in practice it does have some features which make it particularly suited for the purposes of combinatorial optimization The second algorithm we discuss finds its roots in the classical geometry of numbers developed by Minkowski This method has had traditionally deep applications in number theory in particular in diophantine approximation

Combinatorial Image Analysis Reinhard Klette, Jovisa Zunic, 2004-11-22 This volume presents the proceedings of the 10th International Workshop on Combinatorial Image Analysis held December 1-3 2004 in Auckland New Zealand Prior meetings took place in Paris France 1991 Ube Japan 1992 Washington DC USA 1994 Lyon France 1995 Hiroshima Japan 1997 Madras India 1999 Caen France 2000 Philadelphia USA 2001 and Isero Italy 2003 For this workshop we received 86 submitted papers from 23 countries Each paper was evaluated by at least two independent referees We selected 55 papers for the conference Three invited lectures by Vladimir Kovalevsky Berlin Akira Nakamura Hiroshima and Maurice Nivat Paris completed the program Conference papers are presented in this volume under the
