Combining Pattern Classifiers Methods And Algorithms:

Combining Pattern Classifiers Ludmila I. Kuncheva, 2004-08-20 Covering pattern classification methods Combining Classifiers Ideas and Methods focuses on the important and widely studied issue of how to combine several classifiers together in order to achieve improved recognition performance It is one of the first books to provide unified coherent and expansive coverage of the topic and as such will be welcomed by those involved in the area With case studies that bring the text alive and demonstrate real world applications it is destined to become essential reading Structural, Syntactic, and Statistical Pattern Recognition Edwin R. Similarity-Based Pattern Analysis and Recognition Marcello Pelillo,2013-11-26 This accessible text reference presents a coherent overview of the emerging field of non Euclidean similarity learning The book presents a broad range of perspectives on similarity based pattern analysis and recognition methods from purely theoretical challenges to practical real world applications. The coverage includes both supervised and unsupervised learning paradigms as well as generative and discriminative models. Topics and features explores the origination and causes of non Euclidean dis similarity measures and how they influence the performance of traditional classification algorithms reviews similarity measures for non vectorial data considering both a kernel tailoring approach and a strategy for learning similarities directly from training data describes various methods for structure preserving embeddings of structured data formulates classical pattern recognition problems from a purely game theoretic perspective examines two large scale biomedical imaging applications.

Machine Learning and Data Mining in Pattern Recognition Petra Perner, 2009-07-21 There is no royal road to science and only those who do not dread the fatiguing climb of its steep paths have a chance of gaining its luminous summits Karl Marx A Universial Genius

of the 19th Century Many scientists from all over the world during the past two years since the MLDM 2007 have come along on the stony way to the sunny summit of science and have worked hard on new ideas and applications in the area of data mining in pattern r ognition Our thanks go to all those who took part in this year s MLDM We appre ate their submissions and the ideas shared with the Program Committee We received over 205 submissions from all over the world to the International Conference on chine Learning and Data Mining MLDM 2009 The Program Committee carefully selected the best papers for this year s program and gave detailed comments on each submitted paper There were 63 papers selected for oral presentation and 17 papers for poster presentation The topics range from theoretical topics for classification clustering association rule and pattern mining to specific data mining methods for the different multimedia data types such as image mining text mining video mining and Web mining Among these topics this year were special contributions to subtopics such as attribute discre zation and data preparation novelty and outlier detection and distances and simila ties

Computational Intelligence for Pattern Recognition Witold Pedrycz, Shyi-Ming Chen, 2018-04-30 The book presents a comprehensive and up to date review of fuzzy pattern recognition It carefully discusses a range of methodological and algorithmic issues as well as implementations and case studies and identifies the best design practices assesses business models and practices of pattern recognition in real world applications in industry health care administration and business Since the inception of fuzzy sets fuzzy pattern recognition with its methodology algorithms and applications has offered new insights into the principles and practice of pattern classification Computational intelligence CI establishes a comprehensive framework aimed at fostering the paradigm of pattern recognition. Applied Machine Learning M. Gopal, 2019-06-07 Cutting edge machine learning principles practices and applications This comprehensive textbook explores the theoretical under pinnings of learning and equips readers with the knowledge needed to apply powerful machine learning techniques to solve challenging real world problems Applied Machine Learning shows step by step how to conceptualize problems accurately represent data select and tune algorithms interpret and analyze results and make informed strategic decisions Presented in a non rigorous mathematical style the book covers a broad array of machine learning topics with special emphasis on methods that have been profitably employed Coverage includes Supervised learning Statistical learning Learning with support vector machines SVM Learning with neural networks NN Fuzzy inference systems Data clustering Data transformations Decision tree learning Business intelligence Data mining And Multibiometric Systems Karthik Nandakumar, 2008 Multibiometric systems are gaining popularity because much more they are able to overcome limitations such as non universality noisy sensor data and susceptibility to spoof attacks common in unibiometric systems We address two critical issues in the design of a multibiometric system namely fusion methodology and template security We propose a fusion methodology based on the Neyman Pearson theorem for combination of match scores provided by multiple biometric matchers The likelihood ratio LR test used in the Neyman Pearson theorem directly maximizes the genuine accept rate GAR at any desired false accept rate FAR We extend the likelihood ratio based fusion scheme to incorporate the quality of the biometric samples The LR framework can be used for designing sequential multibiometric systems by constructing a binary decision tree classifier based on the marginal likelihood ratios of the

individual matchers The use of image quality information further improves the GAR to 90% at a FAR of 0 001% Next we show that the proposed likelihood ratio based fusion framework is also applicable to a multibiometric system operating in the identification mode We investigate rank level fusion strategies and propose a hybrid scheme that utilizes both ranks and scores to perform fusion in the identification scenario Fusion of multiple biometric sources requires storage of multiple templates for the same user corresponding to the individual biometric sources Template security is an important issue because stolen biometric templates cannot be revoked We propose a scheme for securing multibiometric templates as a single entity using the fuzzy vault framework We have developed fully automatic implementa tions of a ngerprint based fuzzy vault that secures minutiae templates and an iris cryptosystem that secures iris code templates We also demonstrate that a multibiometric vault achieves better recognition performance and higher security compared to a unibiometric vault
