1. INTRODUCTION

In writing this report, we aimed at a dual objective, that is:

(i) to inform the scientific community interested in problems of materials about the information presented at the Congress in Topic 2, and the tenor of the discussion (questions, answers, comments . . .);

(ii) to give, with all the subjectivity this implies, our opinion on the outstanding points presented and discussed and the tendencies defined, and the techniques or concepts which were not presented or not sufficiently developed during the meetings, in spite of their undeniable value and interest.

From these findings and this analysis, we conclude the report with proposals for new prospects for future RILEM activities, especially for the setting up of Technical Committees, whose work should produce recommendations on:

- (i) design of materials and structures,
- (ii) particular use of certain composites especially for reinforcement, and
- (iii) experimental procedures for characterization and identification of materials.

2. QUANTITATIVE AND QUALITATIVE ASSESSMENT OF PAPERS

The total number of papers presented in Topic 2 was 82: 77 published in Volume 2 of the Proceedings, 4 additional papers with oral presentation only, and one displayed as a poster.

This sum of work covers a very wide variety of subjects both as regards the types of materials and the problems arising for each of them. Table 1 gives a tentative classification.

From the quantitative point of view, this table raises the following general comments:

(i) the distribution between the four columns on problems discussed (independently of the type of material) is satisfactorily balanced;

(ii) the greater number of papers (19) dealing with modelling reveals a new tendency;

(iii) the greater number of papers dealing with concretes or mortars reinforced with fibres (about 25% of them all, and half of those papers on concrete) emphasizes the importance of this type of composite material;

(iv) earth as a building material was discussed by a few authors, and this can be considered as a new topic in materials engineering;

(v) traditional materials like steel and timber were practically not touched upon. For steel, this can be explained by the fact that other bodies are more particularly involved (LABSE); for timber, this is more surprising.

3. DETAILED SURVEY OF PAPERS

3.1 Ordinary concretes, improvement of their properties

In a general contribution, K. Gamski examined recent development of concretes showing how their performance is improved by new techniques and constituents (polymers, etc.). The oral presentation completed the printed text as regards shear strength of concrete.

Five papers considered the problems of concrete and mortar technology, especially the use of waste (titano-gypsum) as a setting retarder (D. Dimic *et al.*) and a new method to measure mortar workability (R. Naniwa).

There were also five papers devoted to theoretical study of properties of heterogeneous media of the concrete type. Models were proposed by J. Baron, by H. Schorn and U. Rode and by Prabhat Kumar. New concepts to assess concrete failure by damage mechanisms were presented by Z. P. Bazant and G. Pijaudier-Cabot. Three studies referred to test methods for concrete: D. Maria Vila and P. Hamelin described impact tests whilst F. A. Branco and P. Mendes reported on the problems of thermal diffusion based on measurement of temperature during concrete hydration.

Cement-Based Composites Andrzej M. Brandt, 2009-01-29 Cement Based Composites takes a different approach from most other books in the field by viewing concrete as an advanced composite material and by considering the properties and behaviour of cement based materials from this stance It deals particularly but not exclusively with newer forms of cement based materials This new edition takes a critical approach to the subject as well as presenting up to date knowledge Emphasis is given to non conventional reinforcement and design methods problems at the materials interfaces and to the durability of structures High strength composites and novel forms of cement based composites are described in detail After a basic introduction the book explores the various components of these materials and their properties It then deals with mechanical properties and considers characteristics under various loading and environmental conditions and concludes by examining design optimization and economics with particular emphasis on high performance concretes Researchers graduate students and practising engineers will find this book valuable
