Essays in Evolution and Genetics in Honor of Theodosius Dobzhansky Max K.

Hecht, 2012-12-06 It is not often that one has the opportunity to send a public birthday greeting to a friend and colleague of many years and to congratulate him on having reached the age of reason. In fact it happens only once and comes then as a surprise. Surely it was only a few years ago that we sat together at an International Genetics Congress in Ithaca and only yesterday that we became members of the same department. The eighth floor of Schermerhorn Hall had a north end where the flies were and a south end furnished with mice and in between a seminar room and laboratory. There the distances were short and the doors open and the coffee pot busy. But it now appears that yesterday has fallen thirty years behind and that we have grown up. I find it interesting and appropriate that Dobzhansky's lifetime spans the period of maturation of the fields to which this volume is devoted. This is true in a chronological sense for his birth occurred in the same year 1900 in which modern genetics began. The rediscovery of Mendel's principles and the interpretation of the nature of heredity and variation to which this event led were necessary prerequisites to the development of evolutionary biology as presented in this collection of essays.

Edgar Snow John Maxwell Hamilton, 2003-09-25 Edgar Snow 1905-1972 was one of the most notable Western journalists to report on China in both the revolutionary and postrevolutionary periods. He first became famous in the mid 1930s when he broke through a Nationalist blockade and reached the Communists in northwest China. For nearly a decade no foreign reporter had seen the Communists who were widely regarded as a ragtag bandit army. Snow took them seriously as a national movement. His reporting in the now famous book *Red Star over China* was major news even to the Chinese thousands of whom joined the Communists after reading it. It has remained a seminal reference on the early Chinese Communist movement. In this award-winning biography, journalist John Maxwell Hamilton follows Snow from his birth in Kansas City to his rise as a celebrated foreign correspondent for the *Saturday Evening Post*, his ostracism during the cold war and his role as a singular journalistic bridge between Communist China and the United States. With a new preface by the author, this revealing portrait of the widely misunderstood Snow firmly establishes him as a model for the kind of committed reporting that is crucial to understanding our interdependent world.

The Evolution of Theodosius Dobzhansky Mark B. Adams, 2014-07-14 This volume not only offers an intellectual biography of one of the most important biologists and social thinkers of the twentieth century but also illuminates the development of evolutionary studies in Russia and in the West. Theodosius Dobzhansky 1900-1975 a creator of the evolutionary synthesis and the author of its first modern statement *Genetics and the Origin of Species* 1937 founded modern Western population genetics and wrote many popular books on such topics as human evolution, race and racism, equality and human destiny. In this the first book devoted to an analysis of

the historical scientific and cultural dimensions of Dobzhansky's life and thought an international group of historians biologists and philosophers addresses the full span of his career in Russia and the United States Beginning with the reminiscences of his daughter Sophia Dobzhansky Coe these essays cover Dobzhansky's Russian roots Nikolai L Krementsov Daniel A Alexandrov Mikhail B Konashev the Morgan Lab Garland E Allen William B Provine Robert E Kohler Richard M Burian his scientific legacy Scott F Gilbert Bruce Wallace Charles E Taylor and his social political philosophical and religious thought Costas B Krimbas John Beatty Diane B Paul Michael Ruse Originally published in 1994 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Postwar Decline of American Newspapers, 1945-1965 David R. Davies, 2006-07-30 On the surface the American newspaper industry appears to have changed little from 1945 to 1965 remaining both healthy and prosperous The number of newspapers in 1965 was about the same as in 1945 while during the twenty year period advertising revenues increased substantially despite new competition from television Just as in 1945 the vast majority of newspapers went to press with improved but old fashioned letterpress methods in 1965 And newspaper reporters still professed a strong if now somewhat shaken faith in the federal government at the end of the twenty years But the surface appearance of both stability and profitability obscured profound change In the two decades after World War II the business of newspaper publishing changed significantly in myriad ways By 1965 editors and publishers had recognized the extent of these changes and were beginning to adjust Each of the changes was significant of its own accord and the range of challenges throughout the period combined to transform newspapers and the nation they served by 1965 This transformation was evident to varying degrees in newspapers content their production methods their economic position within the overall media marketplace and their relationship with government Newspapers some more than others made strides to keep up with and overcome some of these challenges But in each of these areas newspapers as a group were slow to respond to the problems facing journalism **The Columbia University Forum**, 1968 New Serial Titles, 1986 A union list of serials commencing publication after Dec 31 1949

Evolutionary Biology Max Hecht, 2012-12-06 The ninth volume of Evolutionary Biology represents a turning point in the history of this series The death of Theodosius Dobzhansky was a blow to the whole field of evolutionary biology in general and to his friends and colleagues including the other two Editors He played a central role in the selection of areas that were ripe for review papers and his circle of friends colleagues and students was so wide that he could always find exactly the most appropriate author and then convince him that he should prepare the paper Evolutionary Biology was founded in 1966 and the first volume published in 1967 Ten years and several vicissitudes later it seems advisable to restate

the original concept of this serial publication The Preface of Volume 1 says simply We have conceived this serial as a forum in which critical reviews and commentaries as well as original papers and even controversial views can be brought together to cover a broad range of interest with provocative discussion Evolutionary Biology will provide research workers and students with an exceptional opportunity to read expert presentations of developments in areas of their field in which they are not specialists and as specialists they will see how others assess these developments An important feature is that contributions are not necessarily limited in length subject and other restrictions that usually prevail in basic research journals
