Compass And Gyroscope Integrating Science And Politics For The Environment:

Compass and Gyroscope Kai N. Lee, 1993-06 Using the Columbia River Basin in the Pacific Northwest as a case study Kai Lee describes the concept and practice of adaptive management as he examines the successes and failures of past and present management experiences Throughout the book the author delves deeply into the theoretical framework behind the real world experience exploring how theories of science politics and cognitive psychology can be integrated into environmental management plans to increase their effectiveness Integrating Science and Policy Roger E Kasperson, 2012-08-06 As progress towards a greater knowledge in sustainability science continues the question of how better to integrate scientific progress with actual decisions made by practitioners remains paramount This book aims to help close the gap between science and practice Based on a two year collaborative project between Harvard and Clark Universities the book takes as its focus the vulnerability and resilience of people around the world to the effects of environmental change a mature area of research in which one might expect the gap between science and policy practice to have been extensively bridged The book presents analysis of past studies interviews conducted with the producers and users of scientific knowledge and case studies performed by leading scholars across a spectrum of international settings and political systems Crucially the authors identify new directions and tools for closing the gap between science and policy across a range of situations and societies The result is an illuminating collection of studies and analyses that suggest to researchers students practitioners and policy makers alike how best to ensure that high quality environmental research informs good environmental policy and practice **ACKNOWLEDGEMENTS** The editors and authors are grateful to Lu Ann Pacenka who formatted the text of the book The editors also wish to express their appreciation to Bill Clark and Nancy Dickson of Harvard University who commissioned and provided oversight for the preparation of the volume Both editors and authors wish to express their appreciation to the David and Lucile Packard Foundation for providing funds to support the project Finally the editors are grateful for the continuing support of the George Perkins Marsh Institute at Clark University Published with Science in Society *The Application of Science in Environmental Impact Assessment* Aaron J. MacKinnon, Peter N. Duinker, Tony R. Walker, 2018-01-12 This book charts the history of the application of science in environmental impact assessment EIA and provides a conceptual and technical overview of scientific developments associated with EIA since its inception in the early 1970s The Application of Science in Environmental Impact Assessment begins by defining an appropriate role for science in EIA From here it goes on to reflect more closely on empirical and deductive biophysical sciences as they relate to well known stages of the generic EIA process and explores whether scientific theory and practice are at their vanguard in EIA and related applications Throughout the book the authors reflect on biophysical science as it applies to stages of the EIA process and also consider debates surrounding the role of science as it relates to political and administrative dimensions of EIA Based on this review the book concludes that improvements to the quality of science in EIA

will rely on the adoption of stronger participatory and collaborative working arrangements. Covering key topics including foundational scientific guidance materials frameworks for implementing science amid conflict and uncertainty and emerging ecological concepts this book will be of great interest to students scholars and practitioners of EIA. *Governing the Air* Rolf Lidskog, Goran Sundqvist, 2011-10-28 Experts offer theoretical and empirical analyses that view the regulation of transboundary air pollution as a dynamic process. *Governing the Air* looks at the regulation of air pollution not as a static procedure of enactment and agreement but as a dynamic process that reflects the shifting interrelationships of science policy and citizens. Taking transboundary air pollution in Europe as its empirical focus the book not only assesses the particular regulation strategies that have evolved to govern European air but also offers theoretical insights into dynamics of social order political negotiation and scientific practices. These dynamics are of pivotal concern today in light of emerging international governance problems related to climate change. The contributors all prominent social scientists specializing in international environmental governance review earlier findings analyze the current situation and discuss future directions for both empirical and theoretical work. The chapters discuss the institutional dimensions of international efforts to combat air pollution examining the effectiveness of CLRTAP Convention for Long Range Transboundary Air Pollution and the political complexity of the European Union offer a broad overview and detailed case studies of the roles of science expertise and learning and examine the missing link in air pollution policies citizen involvement. Changing political conditions evolving scientific knowledge and the need for citizen engagement offer significant challenges for air pollution policy making. By focusing on process rather than product learning rather than knowledge and strategies rather than interests this book gives a nuanced view of how air pollution is made governable. **Reconstructing Sustainability Science** Thaddeus R. Miller, 2014-12-05 The growing urgency complexity and wickedness of sustainability problems from climate change and biodiversity loss to ecosystem degradation and persistent poverty and inequality present fundamental challenges to scientific knowledge production and its use. While there is little doubt that science has a crucial role to play in our ability to pursue sustainability goals critical questions remain as to how to most effectively organize research and connect it to actions that advance social and natural wellbeing. Drawing on interviews with leading sustainability scientists this book examines how researchers in the emerging interdisciplinary field of sustainability science are attempting to define sustainability establish research agendas and link the knowledge they produce to societal action. Pairing these insights with case studies of innovative sustainability research centres the book reformulates the sustainability science research agenda and its relationship to decision making and social action. It repositions the field as a science of design that aims to enrich public reasoning and deliberation while also working to generate social and technological innovations for a more sustainable future. This timely book gives students researchers and practitioners a valuable and unique analysis of the emergence of sustainability science and both the opportunities and barriers faced by scientific efforts to contribute to social action.

Global Challenges, Governance, and Complexity Victor Galaz, 2019-12-27 There is an increased interest in integrating insights from the complexity sciences to studies of governance and policy While the issue has been debated and the term of complexity has multiple and sometimes contested interpretations it is also clear the field has spurred a number of interesting theoretical and empirical efforts The book includes key thinkers in the field elaborates on different analytical approaches in studying governance institutions and policy in the face of complexity and showcases empirical applications and insights

Turmoil in American Public Policy Leslie R. Alm, Ross E. Burkhart, Marc V. Simon, 2010-04-15 This book explores the intricacies of the science policy linkage that pervades environmental policymaking in a democracy These are the key questions that this primary textbook for courses on American public policymaking and environmental policymaking addresses and attempts to answer Turmoil in American Public Policy Science Democracy and the Environment first lays out the basics of the policymaking process in the United States in relation to the substantive issues of environmental policymaking Drawing on hundreds of interviews the authors highlight the views and experiences of scientists especially natural scientists in their interactions with policymakers and their efforts to harness the findings of their science to rational public policy The proper role of science and scientists in relation to environmental policymaking hinges on fundamental questions at the intersection of political philosophy and scientific epistemology How can the experimental nature of the scientific method and the probabilistic expression of scientific results be squared with the normative language of legislation and regulation If scientists undertake to square the circle by hardening the tentative truths of their scientific models into positive truths to underpin public policy at what point may they be judged to have exceeded the proper limits of scientific knowledge relinquished their role as impartial experts and become partisan advocates demanding too much say in a democratic setting Providing students and secondarily policymakers scientists and citizen activists a theoretical and practical knowledge of the means availed by modern American democracy for resolving this tension is the object of this progressively structured textbook **The**

Governance of Western Public Lands Martin Nie, 2008-02-08 Issues like clearcutting wilderness preservation and economic development have dominated debates over public lands for years yet we seem no closer to resolving these matters than we ever were Martin Nie now looks at why there continues to be so much conflict about public lands and resource management and how we can break through these impasses Showing that such conflicts have been driven by interrelated factors ranging from scarcity to mistrust and politics he charts the present status and future prospects of public lands management in America Nie looks closely at two of today's most intractable conflicts the designation of U S Forest Service roadless areas and management of the Tongass National Forest in Alaska He uses these cases to investigate more inclusive issues about governing federal lands in the West such as the contested use of science and litigation lengthy planning processes and controversial practices of Congress and the president in managing environmental disputes Along the way he addresses such other conflict areas as snowmobiles in Yellowstone bear and wolf protection fire and forest health drilling in

Montana's Rocky Mountain Front and federal grazing policy Nie emphasizes the complicated and often contentious interaction between the branches of the federal government as a major factor in misunderstandings He particularly cites the problem of vague statutory language which tells our public land agencies little about what they should be doing but lots about how they should be doing it Nie reexamines this confusing body of law and policy in which the rulemaking process wags the dog and agencies are caught in political quagmires to show how the pieces fit but more often don't Throughout the book Nie considers the factors that make some public land conflicts so controversial revisits how they have been dealt with in the past and proposes ways they might be better managed in the future Eschewing the single policy approach to public lands management such as encouraging free markets he instead surveys a diverse array of other available options His big picture outlook for the twenty first century is a bold call for reshaping ongoing conflicts and for reinvesting in our public lands

Philosophy and Geography III Andrew Light,Jonathan M. Smith,1998-12-23 Places are today subject to contrary tendencies They lose some functions which may scale up to fewer more centralized places or down to numerous more dispersed places and they gain other functions which are scaling up and down from other places This prompts premature prophecies of the abolition of space and the obsolescence of place At the same time a growing literature testifies to the persistence of place as an incorrigible aspect of human experience identity and morality Place is a common ground for thought and action a community of experienced particulars that avoids solipsism and universalism It draws us into the philosophy of the ordinary into familiarity as a form of knowledge into the wisdom of proximity Each of these essays offers a philosophy of place and reminds us that such philosophies ultimately decide how we make use and understand places whether as accidents instruments or fields of care **Journal of Land Use & Environmental Law ,2006** **Proceedings of the 8th International Coastal Symposium : ICS 2004 : Itajai/Itapema, Santa Catarina, Brazil, 14 to 19 March, 2004 ,2006** Vadose Zone Science and Technology Solutions Brian B.
