**Attribute Grammars, Applications and Systems** Henk Alblas, Borivoj Melichar, 1991-10-23 Attribute grammars have shown themselves to be a useful formalism for specifying the syntax and the static semantics of programming languages. They are also useful for implementing syntax directed editors, compilers, translator writing systems and compiler generators and any application that has a strong syntactic base. However, no textbooks are available that cover the entire field. To redress this imbalance, an International Summer School on Attribute Grammars, Applications and Systems was held in Prague, Czechoslovakia, in June 1991. The course aimed at teaching the state of the art in attribute grammars and their relation to other language specification methods. This volume presents the proceedings of the school. The papers are well suited for self study and a selection of them can be used for introductory courses in attribute grammars. Encyclopedia of Computer Science and Technology Jack Belzer, Albert G. Holzman, Allen Kent, 1976-12-01 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities. Each article in the Encyclopedia features current developments and trends in computers, software, vendors and applications, extensive bibliographies of leading figures in the field such as Samuel Alexander, John von Neumann and Norbert Wiener, and in depth analysis of future directions. *Encyclopedia of Computer Science and Technology* Allen Kent, James G.
