system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently  
there are over ten different biometrics systems that are either widely used or under development Some automated biometrics  
such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and  
some issues like face recognition and iris based authentication have been studied extensively resulting in successful  
development of biometrics systems in commercial applications However very few books are exclusively devoted to such  
issues of automated biometrics **Automated Biometrics Technologies and Systems** systematically introduces the technologies
