Handbook of Research on Collaborative Teaching Practice in Virtual Learning

Environments Panconesi, Gianni, Guida, Maria, 2017-05-17 Modern technology has enhanced many aspects of life including classroom education. By offering virtual learning experiences, educational systems can become more efficient and effective at teaching the student population. The *Handbook of Research on Collaborative Teaching Practice in Virtual Learning Environments* highlights program developments in the realm of digital worlds in educational settings. Featuring pedagogical methods and topics relating to cooperative learning, hands-on curriculum, and meta-cognitive dimensions, this publication is a critical reference source for pre-service and in-service teachers, school administrators, higher education faculty, and researchers interested in virtual reality incorporation in the classroom.

Social Media in Higher Education: Teaching in Web 2.0 Pătruț, Monica, Pătruț, Bogdan, 2013-02-28 This book provides research on the pedagogical challenges faced in recent years to improve the understanding of social media in the educational systems. Provided by publisher.

From Research to Practice Deborah S. Grealy, Sylvia D. Hall-Ellis, 2009-03-20 New faculty members after arriving with little experience in teaching or planning for teaching. This book helps overcome that challenge. Many if not most schools of library and information science have many students seeking a second career. The information concerning teaching adult learners will be especially helpful for this age group. Different types of learning can be identified and made clear by thinking systematically about outcomes with strategies patterned after the matrix designed by Professor James R. Davis in his book *Highly Effective Strategies*. This book provides behavioral, cognitive, inquiry, mental models, group dynamics, virtual reality, and holistic strategies. Each is described and explanations are given for how it is most effective for developing exercises to instruct, reinforce, and assess specific types of learning. Each strategy also comes with its own appropriate measures of success. Sample materials are included to illustrate these adaptations of the Davis matrix and materials about specific activities and course outcomes are drawn from the authors' ongoing curriculum audit. This book provides a structured platform that serves as a model for teaching and assessing student learning in applied LIS courses. Following Davis's premise that different types of learning can be identified and made clear by thinking systematically about outcomes with strategies including behavioral, cognitive, inquiry, mental models, group dynamics, virtual reality, and holistic, each strategy is deemed most effective in developing exercises to instruct, reinforce, and assess specific types of learning. Each strategy comes with its own appropriate measures of success. With the ALA Committee on Accreditation Standards reflecting the need for student learning outcomes, this book provides both the introduction to this form of evaluation and provides examples of courses using this method of assessment.
