Process Mining Projects Roland Woldt, 2025-09-15 Driving blind and too fast or not fast enough Most organizations have a hard time seeing where their performance lacks They see the metrics from the past but don't have visibility into how these numbers were produced What went well and what did not go so well and why So they have no idea how to improve their processes Do organizations measure the performance of their processes Well often I see only some lagging metrics being measured There are almost no predictive measures being defined and processes are not adapted to changing situations for example when it comes to delays of a supplier shipment There are just a few organizations that actually have their processes formally designed in the form of process models And those who do might see them only as an exercise to appease the gods their management or the regulators This creates interesting results when it comes to audits some poor souls figuring out what actually happens which might lead to regulatory notes that you have not made enough progress or even to hefty fines Overall I am missing an awareness of the need to measure what you are doing Some smart person once said You can only measure what you see and how boring would a football match be if we had not defined what winning means and how you can create the necessary points on the scoreboard Process Intelligence a new frontier for Process Management Over the last couple of years I have seen more interest in addressing these issues Process mining is the speedometer for your business It gives you visibility into how your processes are executed Not only the happy path that you might or might not have documented but all variations that you get from your runtime systems Process mining gives you calculated performance metrics out of the box like frequencies and times and shows you where you have rework or other unwanted behaviors Dashboards show metrics that allow you to investigate your performance hypotheses Data from mining can be embedded in existing BI dashboards You can trigger actions from thresholds and interact with running process instances think notifications alerts or transactions Process mining is embedded in a larger BPM practice You can download discovered processes to use for future state design or simulation Or you upload reference processes and the tool checks to what degree you have conformed to how the work should be done Mining technologies close the missing gap in the process lifecycle and provide a data driven analysis approach for performance management Who is this book for This book is for people who are serious about how they can improve how their organizations run and how they can make their next large transformation project a success It is for the process and architecture practitioners who run their programs for years and don't get the visibility that they deserve It is for the analysts who want to switch their practices to a data driven approach while not forgetting the human contributions in the analysis and for whom the words Digital Gemba sound good And it is for the curious folks who have heard about process intelligence and were wondering what this means and how this fits into their organizations without creating another hype and disappointment when the results of the first project do not meet expectations As you know the first time you do something you most likely suck and that is the same here But wait this is not all This book also comes with an accompanying website which includes additional tools all graphics as PDF and a checklist

for your mining projects It also comes with the necessary source files data workflows reference models in BPMN format an ARIS database and an ARIS Process Mining project **Sound Reporting, Second Edition** Jerome Socolovsky,2024-12-19 An indispensable guide to audio journalism grounded in NPR's journalistic values and practices with tips and insights from its top reporters hosts editors producers and more A lot has changed in media in recent years but one thing that remains steadfast is National Public Radio's NPR position as a trusted source of news in the United States Now producing dozens of shows and podcasts plus livestreams and coverage on other media platforms NPR is the leading authority on reporting writing and delivering audio news and storytelling to today's diverse audiences In this completely revised guide audio journalism trainer Jerome Socolovsky offers a look into just how NPR does it following the same journey a story would from idea to the moment it reaches its listeners Based on more than eighty interviews with producers reporters editors hosts and other NPR staffers Sound Reporting reveals how stories get pitched how they are reported produced written edited voiced and tailored to multiple media formats and how shows and podcasts are put together It begins with a presentation of NPR's values and includes a new chapter on journalist safety a topic of timely importance Podcasts now part of the mainstream of the media universe are treated alongside traditional programs throughout In these pages the voices of NPR staff offer a glimpse into their profession Discover how correspondent Ruth Sherlock overcame seemingly insurmountable odds as she raced to the scene of a devastating earthquake in Turkey the four main ways Ramtin Arablouei incorporates music into podcasts and how Weekend Edition host Ayesha Rascoe touches listeners so deeply she received a pair of homemade potholders in the mail from one of them Reading this book is like sitting in a room full of top notch producers seasoned correspondents trusted hosts and rigorous editors all telling you inspiring stories about their craft to help you learn from their experience At a time when the legitimacy and authority of journalism are under critique transparency into how the news is made is more important than ever This book offers a fascinating look behind the scenes at a premier public media organization and will be a trusted resource for anyone in or exploring a future in audio journalism *International Journal of Comic Art* ,2009 **Beyond Powerful Radio** Valerie Geller,2024-11-29 A complete guide to becoming a successful communicator Beyond Powerful Radio teaches time tested techniques that work in any format radio TV podcast or online Learn how to get keep and grow audiences with powerful storytelling and become a dynamic presenter This book holds the tools needed to create winning content tell compelling stories build your brand develop talent produce a show report the news sell and write commercials Practical tips and methods from over 50 top experts from across the world of media illuminate interviewing managing talent becoming an authentic personality and getting started in the business This fully revised edition features new sections on Podcasting what you need to know to create market and produce on demand audio Social media a guide to best use and social media safety Storytelling an introduction to the Prism method Story Spine and other proven easy to try techniques designed to compel audiences Artificial Intelligence how to harness AI in audio and visual
