Defects In SiO₂ And Related Dielectrics Science And Technology:

Defects in SiO₂ and Related Dielectrics: Science and Technology Gianfranco Pacchioni, Linards Skuja, David L. Griscom, 2012-12-06 Silicon dioxide plays a central role in most contemporary electronic and photonic technologies from fiber optics for communications and medical applications to metal oxide semiconductor devices Many of these applications directly involve point defects which can either be introduced during the manufacturing process or by exposure to ionizing radiation They can also be deliberately created to exploit new technologies This book provides a general description of the influence that point defects have on the global properties of the bulk material and their spectroscopic characterization through ESR and optical spectroscopy

Crystalline Silicon Sukumar Basu, 2011-07-27 The exciting world of crystalline silicon is the source of the spectacular advancement of discrete electronic devices and solar cells The exploitation of ever changing properties of crystalline silicon with dimensional transformation may indicate more innovative silicon based technologies in near future For example the discovery of nanocrystalline silicon has largely overcome the obstacles of using

silicon as optoelectronic material The further research and development is necessary to find out the treasures hidden within this material The book presents different forms of silicon material their preparation and properties The modern techniques to study the surface and interface defect states dislocations and so on in different crystalline forms have been highlighted in this book This book presents basic and applied aspects of different crystalline forms of silicon in wide range of information from materials to devices

Semiconductor Physics Sandip Tiwari, 2020 This text brings together traditional solid state approaches from the 20th century with developments of the early part of the 21st century to reach an understanding of semiconductor physics in its multifaceted forms It reveals how an understanding of what happens within the material can lead to insights into what happens in its use

Ion-Irradiation-Induced Damage in Nuclear Materials Diana Bachiller Perea, 2018-09-26 This thesis investigates the behavior of two candidate materials a SiO₂ and MgO for applications in fusion e g the International Thermonuclear Experimental Reactor ITER and Generation IV fission reactors Both parts of the thesis the development of the ionoluminescence technique and the study of the ion irradiation effects on both materials are highly relevant for the fields of the ion beam analysis techniques and irradiation damage in materials The research presented determines the microstructural changes at different length scales in these materials under ion irradiation In particular it studies the effect of the irradiation temperature using several advanced characterization techniques It also provides much needed insights into the use of these materials at elevated temperatures Further it discusses the development of the ion beam induced luminescence technique in different research facilities around the globe a powerful in situ spectroscopic characterization method that until now was little known Thanks to its relevance rigorosity and quality this thesis has received twoprestigious awards in Spain and France
