Engineering Mechanics of Fibre Reinforced Polymers and Composite Structures J. Hult,F.G. Rammerstorfer,2014-05-04
The book aims at giving an overview of current methods in engineering mechanics of FRP components and structures as well as hybrid components and structures Main emphasis is on basic micro and macro mechanics of laminates Long as well as short fibre composites are studied and criteria for different kinds of rupture are treated Micromechanical considerations for material characterization and mechanisms of static ductile and brittle rupture are studied as well as FRP structures under thermal and dynamic loading programs Optimum design and manufacture situations are described as well The book makes designers familiar with the opportunities and limitations of modern high quality fibre composites Practical engineering applications of the described analytical and numerical methods are also presented **Advances in Composite Tribology** K. Friedrich,2012-12-02 Much research has been carried out and a lot of progress has been made towards the use of composite materials in a wide field of tribological applications In recent years studies have been made to determine to what degree phenomena governing the tribological performance of composites can be generalized and to consolidate interdisciplinary information for polymer metal and ceramic matrix composites The importance of promoting better knowledge in the areas of friction lubrication and wear in general is demonstrated by the contents of this volume It covers a wide range of subjects extending from fundamental research on the tribological characteristics of various multi phase materials up to final applications of composites in wear loaded technical components Besides the emphasis on composites tribology the great practical aspect of the field in many industrial applications is also reviewed by authors who are engaged in applied research as well as those in more academic activities The articles in this volume will facilitate both researchers and mechanical designers in their work towards a set of predictive materials engineering related models for a more reliable use of composites as tribo materials Through the study of and observation of the tribology of sensibly formulated composite systems may emerge a clear and more profound understanding of the subject of tribology In this sense this book offers a major and critical evaluation of the state of understanding of the principles of tribology and its ability to serve the practical and commercial needs of this technology generally and particularly in the context of composite systems *Time Dependent and Nonlinear Effects in Polymers and Composites* Richard Allan Schapery,2000 Annotation Improved reliability in commercial and military applications requires improved understanding of and predictive models for the time dependent and nonlinear mechanical behavior of polymeric composites The May 1998 American Society for Testing and Materials

symposium sought to fuse the efforts in this direction of specialists in polymers and composites these 18 papers are therefore grouped under the subheadings of polymers and composites Primary polymer topics are chemical and physical aging nonlinear viscoelasticity and viscoplasticity Composites issues include the effect of physical aging on time dependent behavior multiaxial nonlinear effects compressive behavior nonlinear viscoelasticity and viscoplasticity failure mechanisms hygrothermal effects durability and accelerated strength testing Schapery is affiliated with the U of Texas at Austin and Sun is at Purdue U Annotation copyrighted by Book News Inc Portland OR **Applied Mechanics Reviews** ,1991
