Bodenhamer,John Corrigan,Trevor M. Harris,2021-09-28 This book explores how we create deep maps delving into the development of methods and approaches that move beyond standard two dimensional cartography Deep mapping offers a more detailed exploration of the world we inhabit Moving from concept to practice this book addresses how we make deep maps It explores what methods are available what technologies and approaches are favorable when designing deep maps and what lessons assist the practitioner during their construction This book aims to create an open ended way in which to understand complex problems through multiple perspectives while providing a means to represent the physical properties of the real world and to respond to the needs of contemporary scholarship With contributions from leading experts in the spatial humanities chapters focus on the linked layers of quantitative and qualitative data maps photographs images and sound that offer a dynamic view of past and present worlds This innovative book is the first to offer these insights on the construction of deep maps It will be a key point of reference for students and scholars in the digital and spatial humanities geographers cartographers and computer scientists who work on spatiality sensory experience and perceptual learning *Deleuze and Science* John Marks,2006 This collection brings together essays on Deleuze and Guattari's treatment of science in *A Thousand Plateaus* and *What is Philosophy* as well as looking in detail at scientific issues such as emergence complexity theory and non linear dynamics *Deleuze/Guattari & Ecology* Bernd Herzogenrath,2009 What does ecology mean if this concept cannot be grounded anymore in an essentialist and clear cut separation of nature and culture nature and man human and non human as Deleuze and Guattari in both their individual and collective works suggest Man and nature are not like two opposite terms

confronting each other not even in the sense of bipolar opposites within a relationship of causation ideation or expression cause and effect subject and object etc rather they are one and the same essential reality the producer product Anti Oedipus 4 5 Deleuze Guattari s generalized ecology turns Ecology into a complex transdisciplinary project linking philosophy art sociology literature politics music history the hard and soft sciences Deleuze Guattari offer a perspective on ecology as a comprehensive natural ontology of complex material systems without falling into the trap of the Cartesian dualism of nature and culture that is still operative in much of the mainstream of ecological ecocritical approaches BOOK JACKET

University Antoine Bailly, Lay James Gibson, Kingsley E. Haynes, 2008 Declines in public support for universities throughout the world have prompted administrators and policy makers to seek alternative funding One favored idea is the entrepreneurial university one that uses modern business practices including commercializing its intellectual property A related notion is the entrepreneurial professor who is willing to explore next commercial markets for his or her intellectual outputs Although these concepts for commercialization and partnerships with business and government are not always appreciated or embraced they are becoming more common particularly in the natural sciences engineering and medicine This book focuses on the field of geography and its potential in the entrepreneurial university The contributors also discuss how to encourage the acceptance of entrepreneurial faculty who move the work of academic geography into the world of commercial applications in industry government and nongovernmental sectors BOOK JACKET

The Philosophical Review Jacob Gould Schurman, James Edwin Creighton, Frank Thilly, Gustavus Watts Cunningham, 2006 **B/ordering Space** Henk van Houtum, Olivier Thomas Kramsch, Wolfgang Zierhofer, 2005 In the wake of globalization numerous social scientists are turning to concepts of mobility fluidity and hybridity to characterize a presumed de territorialization and de bordering of contemporary social and economic relations This book brings together a select group of internationally renowned human geographers to explore the use of these concepts in relation to space place and territory In doing so they re situate the subject of borders as active socio spatial processes from a variety of theoretical perspectives The contributors link debates on borders to discussions within the wider sphere of cultural studies notably those addressing themes of migration post colonialism the formation of national regional identities and radical democratic practice The chapters focus on those discursive practices that constitute bordered geographical entities in the first instance through differentiated regimes of discourse The book thus transcends the narrower field of borderlands research by building bridges to other domains of enquiry within political and human geography *Ethno- and Historical Geographic Studies in Latin America* William V.
