Demographic Anthropology Ezra B. W. Zubrow, 1976-07-30 The articles in this book explore relationships between demographic variables and culture emphasizing cultural and biological structures and processes connected to population trends In addition the book covers topics dealing with sedentism kinship childhood marriage association and stable and unstable economic growth

Current Developments in Anthropological Genetics James H. Mielke, 2012-12-06 The papers in this volume were presented as part of the University of Kansas Department of Anthropology Distinguished Lecture Program on Anthropological Genetics Consecutively each contributor spent approximately a week on the campus at Lawrence participating in a seminar The contributors to this volume were not on campus at one time but visited us on alternating weeks hence a symposium type interchange was not possible between all participants However the students and faculty of Kansas University acted as a sounding board This volume can be considered a companion and continuation of *Methods and Theories of Anthropological Genetics* which was based upon a symposium on the state of the art in 1971 This present volume reflects what we consider to be some of the advances and current developments in anthropological genetics since 1973 Emphasis has shifted to some degree away from population structure analysis as depicted in Crawford and Workman to genetic epidemiology However population structure still remains a fertile and ongoing area of research with many theoretical questions still remaining unanswered

Sources and Methods of Historical Demography J. Dennis Willigan, Katherine A. Lynch, 2013-10-22 *Sources and Methods of Historical Demography* covers the fundamental sources methods and approaches to explanatory modeling for describing analyzing and understanding demographic features of past societies The book discusses the intellectual ancestry of historical demographic research beginning in the 17th century as well as the logic of basic techniques for reconstructing and analyzing information from fundamental source materials The text also describes the full range of disciplines that have made major contributions to historical demography and examples of empirical research The book concludes by arguing the case for conducting historical demographic research with a broad interdisciplinary ideal in mind Historians and sociologists will find the book invaluable

Constructing Frames of Reference Lewis R. Binford, 2001-06-16 Many consider Lewis Binford to be the single most influential figure in archaeology in the last half century His contributions to the New Archaeology changed the course of the field as he argued for the development of a scientifically rigorous framework to guide the excavation and interpretation of the archaeological record This book the culmination of Binford's intellectual legacy thus far presents a detailed description of his methodology and its significance for understanding hunter gatherer cultures on a global basis This landmark publication will be an important step in understanding the great process of cultural evolution and will change the way archaeology proceeds as a scientific enterprise This work provides a major synthesis of an enormous body of cultural and environmental information and offers many original insights into the past Binford helped pioneer what is now called ethnoarchaeology the study of living societies

to help explain cultural patterns in the archaeological record and this book is grounded on a detailed analysis of ethnographic data from about 340 historically known hunter gatherer populations The methodological framework based on this data will reshape the paradigms through which we understand human culture for years to come *Current Developments in Anthropological Genetics* James Mielke, Michael H. Crawford, 1980-07 The papers in this volume were presented as part of the University of Kansas Department of Anthropology Distinguished Lecture Program on Anthropological Genetics Consecutively each contributor spent approximately a week on the campus at Lawrence participating in a seminar The contributors to this volume were not on campus at one time but visited us on alternating weeks hence a symposium type interchange was not possible between all participants However the students and faculty of Kansas University acted as a sounding board This volume can be considered a companion and continuation of *Methods and Theories of Anthropological Genetics* which was based upon a symposium on the state of the art in 1971 This present volume reflects what we consider to be some of the advances and current developments in anthropological genetics since 1973 Emphasis has shifted to some degree away from population structure analysis as depicted in Crawford and Workman to genetic epidemiology However population structure still remains a fertile and ongoing area of research with many theoretical questions still remaining unanswered *The First Farmers of Europe* Stephen Shennan, 2018-05-03 Knowledge of the origin and spread of farming has been revolutionised in recent years by the application of new scientific techniques especially the analysis of ancient DNA from human genomes In this book Stephen Shennan presents the latest research on the spread of farming by archaeologists geneticists and other archaeological scientists He shows that it resulted from a population expansion from present day Turkey Using ideas from the disciplines of human behavioural ecology and cultural evolution he explains how this process took place The expansion was not the result of population pressure but of the opportunities for increased fertility by colonising new regions that farming offered The knowledge and resources for the farming niche were passed on from parents to their children However Shennan demonstrates that the demographic patterns associated with the spread of farming resulted in population booms and busts not continuous expansion **Chinese Ethnic Demography** Yueping Yan, Zhaohe Lv, 2020-06-29 This book focuses on the status quo and current trends concerning ethnic issues in China and seeks to promote the equitable and harmonious development of Chinese and other nationalities around the world Drawing on representative empirical studies and case studies it describes the spatial structure and evolution of China's populace and analyzes the distribution of and legislation on its spatial development which has been conducive to the scientific formulation of national population policies After assessing the development of China's populace the book analyzes the future prospects with regard to achieving the goal of a prosperous society and balancing the population in a comprehensive way puts forward some constructive suggestions on the modernization of the populace and constructs a new knowledge system for national development with Chinese characteristics The book combines qualitative and quantitative

analysis and employs empirical speculative comparative and comprehensive methods to make full use of modern science and technology so as to promote ethnological research into a broader development path Its goal is to objectively evaluate the development of the Chinese populace and provide objective facts and data to support those readers who are interested in its nature and evolution
