Deformation And Failure In Metallic Materials:

Deformation and Failure in Metallic Materials Kolumban Hutter, Herbert Baaser, 2013-11-11 This book is devoted to the deformation and failure in metallic materials summarizing the results of a research programme financed by the Deutsche Forschungsgemeinschaft It presents the recent engineering as well as mathematical key aspects of this field for a broad community Its main focus is on the constitutive behaviour as well as the damage and fracture of metallic materials covering their mathematical foundation modelling and numerics but also relevant experiments and their verification

Microplasticity and Failure of Metallic Materials Anton Puškár, 1989 The effective utilization of energy raw materials metals and manpower in a dynamically developing society calls for the development of materials of unconventional properties and for high endurance and reliability in operation The responses of various materials to unidirectional or repeated mechanical stress has already been examined estimated classified and quantified for more than two centuries In spite of this it is not possible at present to generalize the sophisticated processes occurring in the microplasticity and failure of materials However it is possible to offer a more or less compact physico metallurgical interpretation of such limiting states as plastic flow and material failure The better utilization of latent properties requires thorough knowledge of the physical essence of the critical processes occurring in materials under mechanical loading This book makes use of the accumulated knowledge of elementary processes in microplasticity and failure complemented by the latest knowledge from the world literature and by the results the author and his collaborators have obtained No publication to date provides such data in one volume

Health Monitoring of Structural Materials and Components Douglas Adams, 2007-06-13 The first complete introduction to health monitoring encapsulating both technical information and practical case studies spanning the breadth of the subject Written by a highly respected figure in structural health monitoring this book provides readers with the technical skills and practical understanding required to solve new problems encountered in the emerging field of health monitoring The book presents a suite of methods and applications in loads identification usage monitoring in situ damage identification diagnostics and damage and performance prediction prognostics Concepts in modelling measurements and data analysis are applied through real world case studies to identify loading assess damage and predict the performance of structural components as well as examine engine components automotive accessories aircraft parts spacecraft components civil structures and defence system components In particular the book provides the reader with a fundamental and practical understanding of the material discusses models demonstrating the physical basis for health monitoring techniques gives a detailed review of the best practices in dynamic measurements including sensing presents numerous data analysis techniques using model and signal based methods discusses case studies involving real world applications of health monitoring offers end of chapter problems to enhance the study of the topic for students and instructors and includes an accompanying website with MATLAB programs providing hands on training to readers for writing health monitoring model

simulation and data analysis algorithms Health Monitoring of Structural Materials and Components is an excellent introductory text for newcomers to the subject as well as an excellent study tool for students and lecturers Practitioners and researchers those with a greater understanding and application of the technical skills involved will also find this essential reading as a reference text to address current and future challenges in this field The wide variety of case studies will appeal to a broad spectrum of engineers in the aerospace civil mechanical machinery and defence communities

Unraveling the Role of Interfaces in the Deformation and Failure Behavior of Metallic Materials Under Dynamic Loading Conditions Jie Chen, 2019 Design of next generation high strength metallic materials for damage resistant applications relies on a fundamental understanding of the deformation mechanisms and failure behavior of these materials under dynamic loading conditions The dynamic strength of metals is typically characterized based on the spall strength defined as the peak tensile pressure the metal can withstand prior to failure For pure FCC metals the capability to increase the spall strength is limited due to insufficient microstructural features that can be used to tailor modify the deformation and failure behavior under dynamic loading conditions The current understanding of the role of grain boundaries and deformation twinning in BCC metals however is still in its infancy Another promising strategy to design high strength microstructures is the engineering of nanoscale interfaces in alloy microstructures that may alter the nucleation and evolution of defects damage Such strategies have been successfully demonstrated experimentally in FCC BCC alloy microstructures A critical challenge in engineering these microstructures however is the lack of understanding on the role of

interfaces on the spall failure behavior Such an understanding is particularly challenging using experimental techniques due to the short time and length scales of the processes of nucleation and evolution of defects damage Therefore the goal of this dissertation is to carry out a systematic study using classical molecular dynamics MD simulations to investigate the role of structure and energies of grain boundaries in BCC microstructures as well as the structure size and distribution of FCC BCC interfaces on the twinning de twinning behavior as well as the damage nucleation void nucleation and growth behavior under shock loading conditions Such understanding will enable to identify key microstructural descriptors of the interfaces that determine the spall strength and aid in the design of nanocrystalline Ta and Cu Ta microstructures with enhanced spall strengths for damage tolerant applications **Metals Handbook: Mechanical testing** ,1978 **Handbook of Materials**
