Degrees Of Unsolvability Local And Global Theory Springer Series In Information Sciences:

A Hierarchy of Turing Degrees Rod Downey,Noam Greenberg,2020-06-16 Computability theory is a branch of mathematical logic and computer science that has become increasingly relevant in recent years The field has developed growing connections in diverse areas of mathematics with applications in topology group theory and other subfields In A Hierarchy of Turing Degrees Rod Downey and Noam Greenberg introduce a new hierarchy that allows them to classify the combinatorics of constructions from many areas of computability theory including algorithmic randomness Turing degrees effectively closed sets and effective structure theory This unifying hierarchy gives rise to new natural definability results for Turing degree classes demonstrating how dynamic constructions become reflected in definability Downey and Greenberg present numerous construction techniques involving high level nonuniform arguments and their self contained work is appropriate for graduate students and researchers Blending traditional and modern research results in computability theory A Hierarchy of Turing Degrees establishes novel directions in the field Turing's Legacy Rod Downey,2014-05 A collection of essays celebrating the influence of Alan Turing s work in logic computer science and related areas Algorithmic Randomness and Complexity Rodney G. Downey,Denis R. Hirschfeldt,2010-10-29 Computability and complexity theory are two central areas of research in theoretical computer science This book provides a systematic technical development of algorithmic randomness and complexity for scientists from diverse fields Recursion Theory Chi Tat Chong,Liang Yu,2015-08-17 This monograph presents recursion theory from a generalized point of view centered on the computational aspects of definability A major theme is the study of the structures of degrees arising from two key notions of reducibility the Turing degrees and the hyperdegrees using techniques and ideas from recursion theory hyperarithmetic theory and descriptive set theory The emphasis is on the interplay between recursion theory and set theory anchored on the notion of definability The monograph covers a number of fundamental results in hyperarithmetic theory as well as some recent results on the structure theory of Turing and hyperdegrees It also features a chapter on the applications of these investigations to higher randomness **Mathematical Logic** Petio P. Petkov,2012-12-06 Heyting 88 Summer School and Conference on Mathematical Logic held September 13 23 1988 in Chaika Bulgaria was honourably dedicated to Arend Heyting s 90th anniversary It was organized by Sofia University Kliment Ohridski on the occasion of its centenary and by the Bulgarian Academy of Sciences with sponsorship of the Association for Symbolic Logic The Meeting gathered some 115 participants from 19 countries The present volume consists of invited and selected papers Included are all the invited lectures submitted for publication and the 14 selected contributions chosen out of 56 submissions by the Selection Committee The selection was made on the basis of reports of PC members an average of 4 per sLlbmission All the papers are concentrated on the topics of the Meeting Recursion Theory Modal and Non classical Logics Intuitionism and Constructivism Related Applications to Computer and Other Sciences Life and Work of Arend Heyting I am pleased to thank all persons and institutions that

contributed to the success of the Meeting sponsors Programme Committee members and additional referees the members of the Organizing Committee our secretaries K Lozanova and L Nikolova as well as K Angelov V Bozhichkova A Ditchev D Dobrev N Dimitrov R Draganova G Gargov N Georgieva M Janchev P Marinov S Nikolova S Radev I Soskov A Soskova and v Sotirov who helped in the organization Plenum Press and at last but not least all participants in the Meeting and contributors to this volume **Subject Guide to Books in Print** ,1984 **Paperbound Books in Print** ,1983 **Handbook of Computability Theory** E.R. Griffor,1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers **The Mathematical Intelligencer** ,1984 **Forthcoming Books** Rose Arny,1984-03 **Books in Print** ,1977 **Degrees of Unsolvability** Manuel Lerman,2017 This volume presents a systematic study of the interaction between local and global degree theory Degrees of Unsolvability R. L. Epstein,2014-01-15
