*Cosmic Explosions* J.M. Marcaide, Kurt Weiler, 2005-11-21 Supernovae are among the most energetic phenomena in the Universe and related to almost all aspects of modern astrophysics including starburst galaxies cosmic ray acceleration neutron star and black hole formation nucleosynthesis and ISM chemical enrichment energy input to the ISM cosmic distance scale determination dark energy related cosmological acceleration gamma ray bursts extra solar system neutrino burst detection gravity wave generation and many more Additionally the past 15 years have been particularly productive with many new results and new understanding due in particular to the closest SN in 400 years in SN 1987A in the Large Magellanic Cloud and the unusually bright and close SN 1993J and SN 1994I in the nearby galaxies M81 and M51 respectively In addition the discovery of the gamma ray burst GRB 980425 and its related supernova SN 1998bw and the confirmation of GRB 030329 SN 2003dh tied the study of SNe and GRBs inextricably together With the many developments since the last major supernova meeting in La Serena Chile in 1997 we felt that it was an appropriate time to bring together experts and students interested in the subject for a meeting where SN and GRB properties and interrelationships could be discussed The tenth anniversary of SN 1993J provided such an opportunity and appropriately the meeting was held in Spain where SN 1993J was discovered on the early morning of 28 March 1993 by a Spanish amateur astronomer Francisco Garc a

**Stellar Explosions** Jordi Jose, 2016-01-05 Stars are the main factories of element production in the universe through a suite of complex and intertwined physical processes Such stellar alchemy is driven by multiple nuclear interactions that through eons have transformed the pristine metal poor ashes leftover by the Big Bang into a cosmos with 100 distinct chemical species The products of

*Cosmic Explosions in Three Dimensions* Peter Höflich, Pawan Kumar, J. Craig Wheeler, 2004-12-16 Supernovae and gamma ray bursts are the strongest explosions in the Universe Observations show that rather than being symmetrical they are driven by strong jets of energy and other asymmetrical effects These observations demand theories and computations that challenge the biggest computers This volume marks the transition to a fresh paradigm in the study of stellar explosions It highlights the burgeoning era of routine supernova polarimetry and the insights into core collapse and thermonuclear explosions With chapters by leading scientists the book summarises the status of a fresh perspective on stellar explosions and should be a valuable resource for graduate students and research scientists

*Supernova Explosions* David Branch, J. Craig Wheeler, 2017-08-02 Targeting advanced students of astronomy and physics as well as astronomers and physicists contemplating research on supernovae or related fields David Branch and J Craig Wheeler offer a modern account of the nature causes and consequences of supernovae as well as of issues that remain to be resolved Owing especially to 1 the appearance of supernova 1987A in the nearby Large Magellanic Cloud 2 the spectacularly successful use of supernovae as distance indicators for cosmology 3 the association of some supernovae with the enigmatic cosmic gamma ray bursts and 4 the discovery of a class of superluminous supernovae

the pace of supernova research has been increasing sharply This monograph serves as a broad survey of modern supernova research and a guide to the current literature The book's emphasis is on the explosive phases of supernovae Part 1 is devoted to a survey of the kinds of observations that inform us about supernovae some basic interpretations of such data and an overview of the evolution of stars that brings them to an explosive endpoint Part 2 goes into more detail on core collapse and superluminous events which kinds of stars produce them and how do they do it Part 3 is concerned with the stellar progenitors and explosion mechanisms of thermonuclear Type Ia supernovae Part 4 is about consequences of supernovae and some applications to astrophysics and cosmology References are provided in sufficient number to help the reader enter the literature

**A Summary of the Mechanism of Delayed Detonation** A. G. Butcher, K. P. McCarty, R. L. Keefe, E. J. Bloomer, HERCULES INC MAGNA UT BACCHUS WORKS., 1984 For the past several years extensive studies have been conducted into the aspects of certain observed types of delayed detonation phenomena These studies have been directed primarily to events preceding detonation as opposed to events after shock formation has occurred The types of detonation transition which have been investigated are deflagration to detonation transition DDT and impact initiated delayed detonation XDT Most of the work has been published under the individual topics of XDT and DDT This paper presents a summary of the work on both subjects in an effort to show similarities in the basic behavior of delayed detonation It references experimental results from XDT and DDT and ties these results together with respect to the basic mechanisms leading to transition Published work from several laboratories are referenced to broaden the data base of condition under which delayed detonation can occur Author

*Delayed Detonation After Projectile Impact*, 1993 In an effort to understand the mechanisms which cause munitions impacted by fragments to detonate we conducted a test series in which we impacted 105 mm HEP warheads Comp B loaded by flat faced cylindrical steel projectiles The velocity of the projectile was varied in order to determine a 50% velocity for detonation We instrumented our test with an external blast pressure probe and an internal carbon resistor gage so that we could discriminate between detonations and low order explosive reactions In addition witness plates were used to record the fragmentation pattern of the 105 mm rounds We have observed this broad categories of explosive reaction which are a function of the velocity of the impacting projectile 1 prompt detonation at fragment velocities above 1 150 m s 3 773 ft s 2 delayed detonation at fragment velocities around 1 150 900 m s 3 609 2 952 ft s and 3 no detonation at fragment velocities below 900 m s 2 952 ft s For any given fragment velocity there was a wide variability in the measured delay time for explosive reaction We attribute this variability to possible differences in hit location of the flat nosed projectile on the cylindrical surface of the warhead which would cause differences between the impact shock loadings even though the fragment velocity was the same Delayed detonation Fragment impact Nonprompt detonation Ammunition fragments Explosion effects Fragment velocity

*Delayed Detonation* Jeff Dossett, 2000-12 From the mountains of East Tennessee a young and naive college student of the 1960s plunges into the horrors of the Vietnam War Like many others of that era he grew up with a romanticized and naive vision of the glories of war As an officer and Artillery Forward Observer with the 25th Infantry Division 1967 through 1968 he would live through a year of combat including the 1968 Tet Offensive without a scratch He like other soldiers would suppress the fear and anguish associated with seeing his comrades killed and mutilated Upon returning to the world and to a college campus he would then experience the contempt and ridicule that his peers colleagues and professors had for the Vietnam Veteran This story explores the emotional wounds he and other Vietnam Veterans suffered in silence Ten years later the bomb inside him explodes to scar him for life threatening to destroy his home career and life
